LETTER OF TRANSMITTAL

Department of Public Instruction,

Tallahassee, Florida, December 1, 1926.

To His Excellency,
John W. Martin,
Governor of Florida.

Sir:

In compliance with Section 27, Article IV, of the Constitution of Florida, I have the honor to submit herewith the Biennial Report of the Department of Public Instruction for the two years beginning July 1, 1924, and ending June 30, 1926.

Yours respectfully,
W. S. CAWTHON,
State Superintendent of Public Instruction.

TABLE OF CONTENTS

CHAPTER I

Recommended Legislation, State School Fund, Office Contingent Expenses, Examination Statistics, Free Text Books.

CHAPTER II

Vocational Education.

CHAPTER III

Report of State Supervisor of Elementary Education and State Rural School Inspectors.

CHAPTER IV

Report of State Supervisor of High Schools.

CHAPTER V

Report of State Supervisor of Health and Physical Education.

CHAPTER VI

Report of State Agent for Negro Education.

CHAPTER VII

Statistical Reports of County Superintendents for the School Years 1924-25 and 1925-26.

CHAPTER I

RECOMMENDED LEGISLATION

SOME EDUCATIONAL NEEDS OF THE STATE.

The following appear to be some outstanding educational needs of our State:

1. The maintenance of the present professional and clerical positions of the Department of Public Instruction and of the additional positions of State Supervisor of Health and Physical Education, State Supervisor of Civilian Rehabilitation, and State Supervisor of Teacher Training.

2. An amendment to our Constitution providing for the appointment of county superintendents by county school boards to the end that the position of county superintendent may become professional in character.

3. The appropriation by the Legislature of a fund for Equalizing Educational Opportunities as between the school children of different counties.

4. The repeal of the present law relating to teachers' certificates, and the enactment of another law much shorter and simpler, vesting in the State Board of Education considerable authority in setting up a system of certification based mainly upon education and credentials rather than upon examinations; and associated with a salary schedule which the State Board of Education should be empowered to set up.

5. A law providing for the distribution of the one-mill State School tax and that of the interest on the State School Fund on the basis of aggregate daily attendance instead of that of average daily attendance.

6. Provision for a well trained supervisor in every county of the State, employed by the county school board at its option, the State paying a maximum of half the salary of each supervisor thus employed.

THE STAFFS OF THE DEPARTMENT OF PUBLIC INSTRUCTION

Within the memory of many citizens now living in Florida, the chief school official did all of the clerical work of the office, and did it without the aid of such modern devices as typewriters and adding machines.

In 1893, the superintendent had one clerk; in 1897, the writer visited the office for the purpose of assisting the superintendent for a few days and found only one helper; the same man that was employed there four years earlier. In January, 1913, the clerical staff had increased to three members.

Supervision proper began in 1908, when the General Education Board employed a Professor of Secondary Education, who inspected and supervised high schools under the joint authority of the management of the State University and the State Superintendent of Public Instruction. The two positions of State Rural School Inspector were created by the Legislature of 1913. The acceptance by the Legislature of 1917 of the Smith-Hughes Act passed by Congress in February of the same year, and the appropriation to carry out this act involved the employment of three supervisors, one for agriculture, one for trades and industries, and one for home economics.

In 1920, the General Education Board placed a full-time high school supervisor in the field with the explicit understanding that the Board's appropriation for the work would be discontinued on July 1, 1925. The Legislature of that year not only continued the maintenance of the two positions of Rural School Inspector at increased salaries, but also created the new position of State Supervisor of Elementary Schools and took over the maintenance of the position of Supervisor of High Schools. The position of State Supervisor of Negro Schools was established by the General Education Board in 1919. The salary and traveling expenses of this supervisor are donated to the State. In addition to this donation of \$5300.00, made annually since the inception of the negro work, the General Education Board gave \$1250.00 to the State this year to defray the traveling expenses of one of the state rural school inspectors.

There are now nine supervisory positions, four of them being maintained by the general revenue fund of the State, three by the joint appropriations of the State and Federal

Governments, one by the Florida Public Health Association, and one by the General Education Board. The incumbents of all these positions except the Supervisor of Negro Education now have their offices in that part of the Capitol allotted to the State Department of Education. The intimate relationship existing between any phase of education and every other phase of it renders this arrangement highly desirable; and the benefits resulting from the consolidation are already being noted.

The reports of these supervisors covering the last biennium constitute parts of this report and speak for themselves.

The regular clerical staff consists of the Chief Clerk and of seven other persons giving their full time to the performance of clerical duties. The main divisions of the clerical work are:

1. The collection and compilation of statistics relative to the State School system for the information of legislators and that of taxpayers generally.
2. The certification of teachers, both upon credentials and by examination.
3. The administration of the free text book law.
4. The accounting incident to the receipts and expenditures of the Teachers' Examination Fund, the office Contingent Fund, and the Smith-Hughes Fund.
5. Correspondence relating mainly to the administration of the office and to the activities of the supervisory staff.

It would be unfortunate if the State should discontinue its provisions for any of the lines of work now being carried on by this department.

It would be the part of wisdom not only to continue the maintenance of the existing clerical and supervisory positions, but also to create three additional positions of the latter class, viz: those of Supervisor of Health and Physical Education, Supervisor of Civilian Rehabilitation, and Supervisor of Teacher Training.

On August 7, 1925, the State Board of Education entered into an agreement with Dr. Ralph E. Barnes, representing the Florida Public Health Association, whereby the services of a supervisor of health and physical education were offered to the public schools without cost to the State, and accepted by the Board; the purpose being to

demonstrate the need and value of placing emphasis upon the subject of Health as a part of the school curriculum.

The results of the demonstration during the last year and a half have been most gratifying. Health as a fundamental objective in education has come to the front as never before, and the persistent inculcation of health habits among our school children is a noteworthy feature of most of the school rooms of our State.

The establishment by statute of the position of Supervisor of Health and Physical Education and its future maintenance from the General Revenue Fund is respectfully recommended.

The last Legislature passed House Concurrent Resolution No. 18, empowering the State Board for Vocational Education to co-operate with the Federal Board for Vocational Education in the administration of an Act of Congress relating to the Promotion of Vocational Rehabilitation of Persons Disabled in Industry or Otherwise and Their Return to Civil Employment. This resolution was approved by the Governor on May 25, 1925. Because of the lateness of the date of the acceptance of the provisions of the Federal Act, the necessary appropriation was not placed in the budget; consequently, nothing has been done as yet along the line of rehabilitation. This work is now in full swing in all but twelve of the States, and twenty-five thousand vocationally handicapped persons have been successfully re-trained and lucrative employment has been found for them.

It is recommended that an appropriation be made pursuant to the Resolution passed at the regular session of 1925.

By Chapter 6830, Acts of 1925, Teacher-Training Departments were established in Florida High Schools and an appropriation of \$500.00 was made available for the payment of part of the salary of an instructor for one department in each county. In 1923, the State Board of Education raised the entrance requirement two years, and prescribed certain subjects to be pursued during the third and fourth years of the high school course. Recognition of the work of these teacher-training departments was given in the certificate law of 1923, a graduate of a teacher-training course being made eligible for a First Grade certificate.

The growth of these departments is encouraging. The number of departments was eight in 1923-24, sixteen in 1924-25, twenty-three in 1925-26, and thirty-one in

1926-27. At the present rate of increase the training of teachers for elementary schools will soon be a part of the educational program of most of the counties of the State. During the last three years the number of First Grade certificates issued to the graduates of teacher-training departments is as follows: In 1924, 21; in 1925, 35; in 1926, 123.

For our goal we should have a high school education as the minimum academic qualification of every teacher; we are far short of that goal now. Our high schools are costing a great deal of money; they should yield good returns in the form of a type of rural school teacher superior to many now found in our rural school rooms.

The Legislature of 1925 appropriated \$31,500.00 for each of the years 1925-26 and 1926-27 for teacher-training in our high schools. Such an outlay by the State should be made only on condition that such supervision be exercised as will guarantee that the money will be expended to the best possible advantage.

The high schools of Florida have experienced such an enormous growth, both in number of schools and in enrollment, that it is no longer possible for the high school supervisor to give to the teacher-training departments the attention which their importance demands. A supervisor is needed for this special work, and the creation of the position is respectfully recommended.

THE COUNTY SUPERINTENDENCY

In the report issued by this office for the biennium ending June 30, 1924, I advocated the selection of State and county superintendents by the State and County Boards of Education, respectively.

At the last regular session of the Legislature an amendment was proposed to Section Six of Article VIII of the Constitution, looking to the removal of the superintendency of education from the list of constitutional offices of the county and to the provision by law for this position; also to the prescription by the Legislature of the powers, duties and compensation of this official.

Although the measure did not appear to be in favor at the time, the theory is so sound, and the experiences of Alabama, Arkansas, Kentucky, Louisiana, Maryland and Ohio under the proposed plan appear to be so satisfactory that I am constrained to discuss the subject briefly again.

In the early days of Florida's statehood the county superintendency was not a separate office.

Under an act of the Legislature approved January 10, 1849, Judges of Probate were made superintendents of schools for their several counties by virtue of their office. For his services in this capacity, the county commissioners allowed a judge his actual expenses, and also such additional remuneration as was considered reasonable.

Article V, Section 19 of the Constitution of 1868 provided for the appointment of county superintendents by the Governor along with those of other county officers for a two-year term. The office was at that time deemed to be of sufficient importance to require the full time of the individual appointed to it.

Under the Constitution of 1885 the county superintendent became an officer chosen by popular election.

The administrative and supervisory functions of the office have greatly increased in number with the growth of our public school system. They have also become much more complex.

It is apparent that the professional and academic qualifications of the superintendent should be equivalent to those of any of the teachers or principals whose work it is his duty under the law to direct; in many cases these qualifications are manifestly not equivalent. The superintendency should be a profession like the college professorship, the college presidency, the high school principalship, or the superintendency of cities as found outside of Florida. The reason that the position of head of the county school system is not a professional one is not far to seek; the incentive to prepare for it is lacking. The reason that educators do not spend time and money preparing themselves for this position is that they have no assurance that they will ever become superintendents. On the other hand they have only the assurance of one chance in the State and that is a *fighting* chance in their respective home counties.

It would certainly not be undemocratic to give the voters of the State an opportunity to study this question for a year and a half and to express themselves finally at the General Election in November, 1928. The will of the people should be recognized as supreme. Those favoring the change should cheerfully acquiesce in the verdict of the voters, whatever that verdict might be.

THE NEED OF MORE STATE AID FOR THE COMMON SCHOOLS

The conception of state responsibility for the maintenance of Common Schools is growing stronger over the entire country. This conception was present in the beginnings of all our State systems of public education; our forefathers regarded the education of the citizens of a state as primarily the duty of the state.

An Act of the Florida Legislature approved December 28, 1848, provided that the proceeds of all sales of sixteenth section lands, and all sales of lands selected in lieu of sixteenth sections be paid into the state treasury, and that all laws requiring a separate account to be kept with each township in relation to lands be repealed. This was the beginning of our state school fund. The passage of this Act is evidence that the legislators of that session considered the school money derived from lands sales, in any township, as belonging to the *state at large* and not as belonging to the people of the township in which the land was situated.

Another evidence of the realization of state responsibility in those early days was the passage of an Act approved January 10, 1849, providing that county commissioners could not supplement the amount of the state money apportioned to the county by a levy of *more than double* that amount. The state was thus automatically required to pay at least one-third of the cost of the public schools of a county.

Other evidences of a sense of state responsibility are found in Paragraph 15, Section 19, Chapter 1686, Acts of 1869, requiring that schools be maintained for three months during each year as far as practicable; and in Paragraph 2, Section 20, Chapter 3872, Acts of 1889, making a requirement of a term of four months with the same qualification as that found in the first statute cited.

In recent years, the people of the state as a whole seem to have overlooked the fact that many of the children of the state have but meager school opportunities. During the school year 1925-26, there were 685 white children and 1,403 negro children in two counties adjacent to each other that had a term of four months or less. In a third county there were 313 white children enrolled in six schools, each operating for a term of only four months.

Such conditions should not continue to exist without an effort on the part of the state to change them.

It is recommended that an appropriation of at least \$200,000.00 a year for the next biennium be made for the purpose of aiding counties that are financially unable to maintain schools adequate for the needs of the children of those counties.

The "small fund" method of distribution should be used, that is the responsibility of the county for operating schools should be taken into account.

No county should participate in the fund unless that county:

1. Makes a ten-mill levy on an assessed valuation fixed by the Legislature and checked by the office of the State Tax Equalizer.

2. Maintains all schools of the county for the same length of term as far as the maintenance is provided by the county levy, and by the apportionment made to the county from the one-mill tax fund and the interest on the state school fund.

3. Cannot operate its schools from county and state funds for a term of six months.

Every school should run for at least six months, but it would not be practicable to guarantee such a term to every county eligible to participate in the proposed fund. The state, however, could see to it that all schools while being maintained by county and state funds (including the proposed fund) would have the same length of term.

The fund should be used exclusively for the payment of teachers' salaries.

The experience of other states in the administration of equalization funds has shown that the vast amount of detail involved cannot be provided for in a statute, but that a great many details must be left to state boards of education.

THE CERTIFICATION OF TEACHERS

The criteria of a system of certification capable of contributing efficiently to the development of a state system of education are:

1. State-wide validity of all certificates issued.
2. Elasticity.
3. The recognition of specialization and of different levels of training.

In Florida, the first steps toward the attainment of the first criterion were taken many years ago. Gradually, the issuance of certificates by local authorities has been abandoned. At the present time the state department of public instruction issues all certificates, and these are valid throughout the state.

Because of the fact that our system is controlled by statutes, it is necessarily inelastic. Our Legislature meets every two years, and then because of the congestion of bills, it sometimes fails to provide for such changes in the statutes relating to certificates as would bring the system up to date. Teacher training institutions are continually making researches and discoveries, the results of which should be embodied in requirements for certificates. If a session of the Legislature must be awaited before any change can be made, however small, the system lags behind the times.

The best educational thought of the day tends toward the repeal of all existing statutes on certification and toward its control by State Boards of Education.

A good system of issuing certificates takes into account specialization in the various fields of learning. Fifty years ago high school and college graduation meant fairly definite things. Because of the multiplicity of courses in these types of institutions today, it is not possible to know the extent and character of one's high school or college work by a knowledge of the mere fact that he or she graduated. Evidence of reasonable proficiency in a subject or group of subjects as shown by the records of the institution attended should be a prerequisite to certification to teach that subject or group of subjects.

A system of certifying teachers should differentiate between different levels of training. The work of the high school graduate, that of the normal school graduate, and that of the college graduate should each be recognized only to the extent warranted by the kind and amount of work included in the course completed by that graduate. Our present system of issuing certificates upon examination signally fails in this particular. The college or normal school graduate upon failure to obtain a state certificate on credentials must take her seat in the examination room alongside the examinee that has not the equivalent of a high school education and take her chances at a first, second or third grade certificate. If these two applicants

obtain certificates of the same grade, and if the public does *not* count the education of one the equivalent of that of the other, the examination system is certainly entitled to no credit for any distinction made. We also fail to recognize differences in levels of training when we grant the same teaching privileges to the holder of a first grade certificate as we do to a normal school graduate holding a graduate state certificate. We do not give precedence to training at all when we place certificates obtained by examination upon a parity with those issued upon high school, normal school and college records.

A complete revision of our system should be made so that education *not* examinations would be emphasized.

The title of each certificate should indicate the field of work in which the holder of that certificate is prepared to engage. The titles, First Grade, Second Grade, Third Grade, Graduate State, are too vague and should be discontinued.

The following named classes of certificates are proposed:

The Supervisor's Certificate.—Requirement: Graduation from a standard college course, with 15 per cent of the course in school administration, and, experience of two school years as a high school teacher.

The High School Certificate.—Requirement: Graduation from a standard college course, with 15 per cent of the course in the principles of secondary education and practice teaching; or graduation from a standard college course and three years' teaching experience. (Limited High School certificate temporarily issued.)

The Limited High School Certificate.—Requirement: Completion of at least two years of standard college work in any subject on which certificate is issued for high school instruction.

The Professional Elementary Certificate.—Requirement: Completion of normal training course of at least two years at a standard normal school or teacher's college, with at least one semester devoted to supervised practice teaching.

The Elementary Certificate.—Requirement: Completion of one year, or thirty-two weeks, of a normal training course over and above graduation from a senior high school in Florida.

The Limited Elementary Certificate.—Requirement: Completion of the Teacher Training Course in a Florida High School.

Special High School Certificate.—Requirement: The passing of an examination on the branch or branches that the applicant proposes to teach in high school.

The Special Elementary Certificate.—Requirement: The passing of an examination on orthography, reading, arithmetic, English grammar, composition, geography, United States history, including the Constitution of the United States, physiology, and theory and practice of teaching.

The PERMIT.—Issued in emergency and valid only until the next examination.

There should be a state salary schedule fixing a minimum salary for the holder of each kind of certificate. We are fighting windmills when we prepare and try to operate elaborate systems of certification apart from a state-wide scheme of minimum salaries and a minimum school term.

THE DISTRIBUTION OF THE ONE MILL TAX FUND AND OF THE INTEREST ON THE STATE SCHOOL FUND

The proceeds of the one-mill state tax and those of the interest on the state school fund are now distributed by what is commonly known as the "large fund" method. These monies are gathered into the state treasury and distributed over the state at large on the basis of average daily attendance. Every county receives a part of the fund regardless of its ability or efforts to maintain schools. No recognition is given of the efforts of the county or districts to have better schools through the payment of higher salaries to teachers, through the erection of better school buildings, or through the maintenance of long terms by special tax levies.

During the year 1926, the sum of \$555,000.00 was provided from these funds—about 2.7% of the total cost of the public schools of the State during the school year 1925-26. It is apparent that these funds must be materially increased before much relief can be expected by the counties of small taxable wealth per child, if the large fund plan shall continue to be employed.

Section 4, of Article XII provides ways for increasing the principal of the State School Fund. The State tax could be increased by a Constitutional amendment. The principal of the State School fund has been doubled during the last two years; it will continue to grow with the sales of lands. Additions to this fund by the legislature from time to time would tend to safeguard the educational opportunities of the children of future generations.

If Section 9 of Article XII as amended takes precedence of Section 7 of the same Article, the legislature is now empowered to distribute these funds on the basis of aggregate daily attendance. To my mind, such a basis of apportionment would be more equitable than the present one and should be used in future.

COUNTY SUPERVISORS

An ideal school system would include the presence of a well-trained teacher in every classroom in the system. Even under such conditions, supervision of the teaching would be desirable. The best of teachers can improve under constructive criticism.

The next best thing to an educated, mature, and skillful teacher in every classroom, is a trained director, constantly in the field, giving advice, inspiration and encouragement to those on the firing line. It has been conclusively proven that the best results in teaching have been obtained in schools that have had the best supervision.

Hundreds of our class rooms are in charge of immature, young persons with little or no pre-service training either academic or professional. More than six hundred applicants for teachers' certificates at the examinations conducted in August, 1926, or about one-third of the total number of applicants, had less than the equivalent of a high school education.

There should be an expert supervisor in every county to the end that good teachers might be made better ones and that poor teachers be made good teachers.

It is recommended that a law be enacted whereby it would be the privilege of a county board of public instruction to employ a supervisor, the State Board of Education approving the selection, and the State paying half the salary of the supervisor, within certain limits, from the interest on the State School Fund.

FREE TEXT BOOKS

After the passage of the free text book law, by the Legislature of 1925, in regular session, contracts were executed between the State School Book Commission and the publishers of the State adopted books, said contracts being supplemental to those already existing between these publishers and the Commission.

These supplemental contracts contain the following provisions:

1. That text books ordered by the State Superintendent of Public Instruction under the provisions of Chapter 10254, Laws of Florida, approved May 26, 1925, shall be supplied the Superintendents of Public Instruction of the several counties of the State through the State Depository located at Jacksonville, Florida, and that the books so supplied shall be billed to the State of Florida by the State Depository at ten per cent less than the existing retail prices under the original contract.

2. That during the existence of the supplemental contracts, any litigation resulting in an injunction preventing any person, officer, or board from acting under Chapter 10254, or under the supplemental contracts, shall result in the suspension of the supplemental contracts till the termination of such litigation; and that if the decision is against the supplemental contract, then the contracts of February 20, 1924, shall continue in full force and effect, and shall constitute the only basis of supplying text books under the present adoption.

3. That the contracting publishers shall use their best endeavors to secure and maintain local depositories in each of the several counties of the State, but shall be relieved from all liability on their several bonds for failure to maintain such local depositories, if it shall be made to appear to the satisfaction of the Commission that the publishers could not maintain these depositories after exhausting their best efforts.

4. That all orders made by the State Superintendent of Public Instruction shall be examined and approved by the State School Book Commission before being sent in and that no orders shall be allowed in excess of the sum available from the State Text Book Fund.

5. That nothing in the supplemental contracts shall be construed to prevent the changing or altering of the same

when the publishers and a majority of the School Book Commission shall agree thereto.

When it was discovered that the levy of three-fourths of a mill would not yield sufficient revenue to purchase all of the books adopted for the first six grades, the Commission approved a partial list of the basal books used in these grades as submitted by the State Superintendent of Public Instruction.

Books were ordered shipped to the several counties on the basis of pupils enrolled on or about March 1, 1926. Duplicate shipments were made to one county in the storm-stricken area where all books in the first shipment had been lost. In another county, a large part of the original order was duplicated for the same reason.

It is estimated that the State Text Book Fund will be sufficient to furnish all basal books for the first six grades for the school year 1927-28.

Attention is called to statement following:

ENROLLMENT MARCH 1, 1926

CHAPTER II

VOCATIONAL EDUCATION.

Hon. W. S. Cawthon, Executive Officer
State Board for Vocational Education
Tallahassee, Florida,

Dear Sir:

The undersigned have the honor to submit, herewith, the biennial report of Smith-Hughes activities for the period ending June 30, 1926.

Respectfully submitted,

E. W. GARRIS,
State Supervisor Agricultural Education.

C. O. HOLLEY,
State Supervisor Trade and Industrial Education.

ELOISE D. BERRY
State Supervisor Home Economics Education.

DEVELOPMENT OF VOCATIONAL EDUCATION SINCE 1917

The National Vocational Education Act was passed by Congress in February 1917, approximately ten years ago. Prior to that time few states had developed a program for training boys and girls in secondary schools for specific vocations. The passage of this Act has done much to stimulate interest in Florida in agriculture, home making, and in the various trades.

Florida, like practically every other state, has tried to organize different kinds of classes to suit the needs of people who desired this training. Classes have been organized for pupils who are regularly enrolled in the high school, for pupils who have dropped out of school and are still of school age, and for adult workers.

State Supervisors have been employed for Agricultural Education, Home Economics Education, and Trade and Industrial Education. These people are now located in the State Department of Education and each person has the

responsibility of developing his particular part of the program.

Each year the total amount of Federal funds available has been matched by State funds.

The following table shows the total amounts available from Federal funds each year since the passage of the National Vocational Education Act in February 1917:

AVAILABLE FEDERAL FUNDS FOR VOCATIONAL EDUCATION
SINCE 1917.

VOCATION.	1917-18	1918-19	1919-20	1920-21	1921-22
Agriculture	5,405.79	8,108.68	10,811.57	13,514.47	17,877.53
Trade and Industries	4,000.00	4,000.00	4,144.11	5,180.14	7,926.37
Home Economics	1,000.00	1,000.00	1,036.03	1,295.04	1,981.59
Teacher Training	5,000.00	5,748.87	10,000.00	10,000.00	10,000.00
Total	15,405.79	18,857.55	25,991.71	29,989.65	37,785.49

VOCATION.	1922-23	1923-24	1924-25	1925-26	1926-27
Agriculture	20,857.12	23,836.71	29,795.88	35,755.06	35,755.06
Trade and Industries	9,247.44	10,569.50	13,210.62	15,892.74	15,892.74
Home Economics	2,311.85	2,642.12	3,302.65	3,923.18	3,923.18
Teacher Training	10,000.00	10,000.00	10,000.00	10,000.00	10,000.00
Total	42,416.41	47,048.33	56,309.15	65,570.98	65,570.98
Grand Total					404,945.04

The number of people enrolled by years since 1917 is given in the table below:

ENROLLMENT IN VOCATIONAL EDUCATION
SINCE 1917

Year	Enrollment
1917-18	232
1918-19	166
1919-20	1,163
1920-21	1,723
1921-22	2,613
1922-23	3,042
1923-24	4,085
1924-25	5,549
1925-26	5,096
1926-27	6,000*
Total	29,669

*Estimate.

GENERAL STATEMENT OF DISBURSEMENTS YEAR 1924-25

The following table gives a general summary of all disbursements made by the State Board from Federal and State Funds, with the unexpended balances in the State Treasury, June 30, 1925:

EXPENDED FOR VOCATIONAL COURSES IN COLLEGES AND SECONDARY SCHOOLS FOR THE YEAR 1924-25.

	State Funds	Federal Funds	Both Funds
Agriculture:			
Salary of teachers	\$ 25,506.25	\$ 25,506.25	\$ 51,012.50

AGRICULTURAL EDUCATION

1924-1926

The Federal funds from the National Vocational Education Act have reached their maximum. Any increase in the amount available for the reimbursement of the salaries of teachers must come from the State. The Federal funds now available for the reimbursement of agricultural teachers' salaries are \$35,755.06. This amount is matched by State funds, making a total of \$71,510.12. The money is reimbursed on the basis of \$1500.00 per year for white teachers and \$900.00 per year for colored teachers.

The demand for establishing new departments is increasing. Many counties have asked for several departments in addition to the ones already established. The consolidation of more rural schools should make the demand still greater.

The teachers of agriculture are employed for twelve months in the year. Besides the classroom teaching the agricultural teacher helps supervise the practice work of each pupil and helps in trying to solve the agricultural problems of the community. He is required to be a graduate from a standard Agricultural College. This places the service of a well trained man in each rural community where agriculture is taught.

The training of agricultural teachers is done at the University of Florida under Prof. James G. Gee for whites and at the Florida A. & M. College under Prof C. O. Brown for negroes. The prospective teachers are given special help in methods of teaching suitable for vocational agriculture.

The time of one State Supervisor of Agricultural Education is devoted to the promotion, inspection and supervision of the work. This is accomplished by personal visits to each teacher, by holding sectional and State conferences, and by correspondence. At present there are forty-five teachers of vocational agriculture. It is impossible for one man to do the office work necessary and then have time for effective supervision. The addition of an assistant State Supervisor would be well worth the cost in increased service to the men in the work.

The program as now being carried out in the State is as follows:

1. Teaching all day pupils in the high school. The boys have to be fourteen years old or over and they have

to take agriculture for 90 minutes per day in addition to their home supervised practice work.

2. Day unit courses given by the agricultural teacher in some nearby elementary school. The pupils have to be fourteen years of age or over and the class must meet for at least one 90 minute period per week. Supervised practice work is required.

3. Part time courses given to a group of boys who have dropped out of school: usually given to boys from 14 to 21 years of age. The work may be given at any place suitable for a meeting place for the boys. English, arithmetic, reading and civics may be given to this group if desirable.

4. Evening courses organized for helping a group of adult farmers on some specific problems in agriculture.

5. Supervising the practice work of all pupils who are taking any organized instruction in agriculture.

The following tables give the amount of money reimbursed to the different agricultural departments during the two year period and a statement of the results of the supervised practice work conducted:

TRADE AND INDUSTRIAL EDUCATION

A survey of the trade and industrial situation in the State of Florida reveals a general program of industrial development of unusual proportions; a constant and growing demand for skilled mechanics to meet the needs of this development; a growing desire on the part of the State's people to provide for the training of its youth that they may become fit for successful participation in the occupational pursuits incident to this program of development; more favorable recognition by mechanics, and their employers of the value of trade extension work as a means of attainment to more definite knowledge of the skill in the trades; programs of vocational education in all the larger cities and several of the smaller cities of the State, each with an organization able to provide an educational service commensurate with the training needs.

The Department of Trades and Industries has functioned very successfully in its efforts to meet the situation thus revealed. During the biennium much material assistance has been rendered by local agencies. An increasing public financial support has been received, both from the standpoint of buildings and equipment in, and with which, to carry on the programs of industrial education, and of matching Federal and State funds for the payment of teachers' salaries. The Brewster Vocational School at Tampa, costing more than \$125,000; the Donnelly building at Montverde, at a cost of \$15,000; buildings at Miami, Lemon City, at a cost of \$20,000.00 and improved housing conditions in other cities are evidences of the public confidence in the purpose and educational service of Trade and Industrial training.

As another evidence of community support comes the appointment of local directors of vocational education, which gives each program a present and active representative to industry and a coordinator of the efforts of the department and industry in the training of the worker. At the close of this period ten of the State's leading cities have men definitely assigned to the duties of director, and who are actively engaged in the development of this phase of vocational education.

The activities of the industrial education forces in the State have been directed to work in the trades for adult

workers, and part-time continuation schools for employed young workers. The communities have been fortunate in the type of teachers secured for the instruction. Teacher training facilities have been limited but much has been done along this line on the actual job. Resident courses, teacher training conferences, both local and Federal, have been well attended, and much profit has been carried to the several local programs as a result of this instruction of teachers and directors.

Work within the department has been found most profitable in teacher training, promotion, and supervision. The need of this service has been great and is increasing.

Florida's cities vary so much in the matter of supporting industry, and the subsequent employment of workers in industrial pursuits, that the type of vocational program suited to each is definite and individual in its opportunity to serve. Where numbers of men, women, boys or girls sufficiently large are already employed, and there is an instructional service that will fit them to perform the duties of the present jobs with more ease and efficiency, or where groups exist who wish to train for a definite work, industrial education training has a place. The following types of courses have been employed:

Evening Trade Extension.—The controlling purpose of these courses is to extend the working knowledge and to further develop the skill of the workman in his trade. All persons over 16 years of age who are actively engaged in trade work are privileged to enter these courses.

Part-Time.—This work is intended to increase the vocational and civic intelligence of the young worker. Employed boys and girls over 14 years of age are entitled to further educational training. This training may serve them in any one of three ways, i. e. it may supplement the training they are getting on the daily job, it may be in preparation for a chosen vocation, or, it may be, as in the case of juvenile employment, further study of the regular school subjects. By cooperation of the employer in giving of the workers time from the job and the Industrial Education Department working with the public school in setting up special classes for the worker's instruction, this opportunity is duly extended.

Day Unit-Trade.—This type course is intended to prepare an individual for following one trade, thus giving in-

dividuals fitted physically and mentally to learn a definite trade a chance to do so. Two trade courses of of this type have been conducted regularly through the two years covered by this report.

In summary, the work of the department for this bien-nium is shown in the following tabulations:

HOME ECONOMICS EDUCATION 1924-26

A Supervisor of Home Economics is employed by the State Board for Vocational Education. In addition to supervising the schools and classes that receive State and Federal Aid, she promotes home economics in all the public schools in the State.

There is a decided interest in home economics in the state. During the year of 1924-25, according to the reports of the county superintendents, there were fifty-two departments in the state. This was an advance of ten departments over the previous year's record. During the year 1925-26 there were seventy-eight departments in the state. For the past few years Jacksonville has employed a supervisor of home economics who supervises the work in Jacksonville and in Duval County. Tampa has had a supervisor of home economics during the year 1925-26 and Miami has employed one for the year 1926-27 who will supervise the work in the schools in Miami and Dade County. Home economics has been added to the program of work in the junior high schools in Jacksonville, Tampa and Orlando; it will be added to the program of work in the junior high schools of Miami for the year 1926-27. There has been an increased interest also, in raising the standards of home economics through better planned and equipped departments and the employment of better trained teachers.

The state course of study which plans that each year's work shall be that of a well rounded course in home making is used in practically every school in the state. A unit of credit is given to this year's work in home making.

During the year 1924-25 there were eight schools in the state receiving State and Federal Aid. The enrollment in the home economics classes in these schools was two hundred and ninety-eight. During the year 1925-26 there were eleven schools in the state receiving aid. There were five hundred and sixty-six students enrolled in the home economics classes in these eleven schools, which was an increase of two hundred and sixty-eight in enrollment over the past year.

There has been an increased demand for evening classes for home makers. During the year 1924-25 these evening classes for home makers were held in five cities of Florida with an enrollment of nine hundred and forty-one. During the year 1925-26 these classes were held in seven cities in

the state with an enrollment of eight hundred and forty-eight. The work offered in these classes in short unit courses of from twelve to sixteen lessons, was that in meal planning and preparation, dressmaking, costume designing, millinery, child care and training, and interior decoration. Those enrolled in these classes must be at least sixteen years of age and should be home makers. The local supervisors of trade and industrial education have been of great assistance in organizing and supervising these classes.

The teacher training work at the Florida State College for Women is given in a four-year course. During the year of 1925-26 an assistant was added to the teacher training department, thus providing for closer supervision of the practice teaching work. The supervised practice teaching consisting of from forty to sixty lessons was done at the Leon County High School and the College Demonstration School. Each student teacher did half of her teaching in one school and half in the other, thus gaining experience in the two types of schools.

At the A. & M. College the teacher training is given in a two-year course. Here the supervised teaching consisting of thirty-two lessons is done in the College Model School. Twenty-five hours of observation is required of the students in the methods classes.

CHAPTER III

ELEMENTARY EDUCATION

REPORTS OF THE STATE RURAL SCHOOL INSPECTORS AND THE STATE SUPERVISOR OF ELEMENTARY SCHOOLS

Honorable W. S. Cawthon,
State Superintendent of Public Instruction,
Tallahassee, Florida.

Sir:

I have the honor to transmit to you herewith certain reports of the Florida elementary schools for the biennium beginning July 1, 1924, and ending June 30, 1926.

EXPLANATORY STATEMENT

Inasmuch as the position of State Supervisor of Elementary schools was provided for by the Legislature of 1925 the present supervisor has been in his position for only one year. Prior to the creation of this position all of the work of elementary supervision done by the State Department of Public Instruction was performed by two State Rural School Inspectors, and the holders of those positions up to July 1, 1925, Messrs. M. P. Geiger and R. L. Turner, have made reports for the first year of the biennium which are herewith given.

On account of lack of appropriation for traveling expenses for more than one State Rural School Inspector for the year beginning July 1, 1925, only one such inspector, Miss Nettie E. Brogdon, was appointed for that year. Her report for the year beginning July 1, 1925 is here included.

REPORTS OF RURAL SCHOOL INSPECTORS

July 1st, 1925.

Hon. W. S. Cawthon,
State Supt. of Pub. Inst.,
Tallahassee, Florida.

Dear Sir:

I have the honor to submit herewith this brief annual report of my work as one of the State Rural School Inspectors for the scholastic year of 1924-1925.

In order to make this report brief I have combined all statistical and general facts.

During the twelve months, from July 1st, 1924, to June 30th, 1925, I visited and inspected schools in twenty-nine (29) counties. In these twenty-nine counties I visited two hundred forty-seven (247) public schools.

During the year I judged the School Exhibits at two County Fairs, Okaloosa and Madison.

I attended five Teachers' Institutes and, by special request, was present at several school meetings. I assisted in the organization of several Parent-Teacher Associations. Besides all this I did much general school work by meeting with County School Boards and speaking at County Normals. I have constantly reported, officially, the needs and conditions of the rural schools visited. I have furnished many plans and specifications for new buildings. During this period I delivered eight commencement addresses.

It has been my aim throughout the year to improve rural school conditions and help in school improvement.

For more than thirty years I have been engaged in school work. All these years I have been endeavoring to help make schools healthier, happier and better places for children to develop into healthy and efficient men and women, Citizens.

The time spent in the office has been taken up entirely with reading bulletins, making out Daily Programs as requested, getting out circular letters, writing bulletins, "Consolidation of Schools" and School Buildings", making monthly reports and answering correspondence.

I wish to thank all county superintendents for their untiring efforts, the teachers for their splendid co-opera-

tion and the public in general for its endorsement of my work. But for all these any progress would have been impossible.

Respectfully,

R. L. TURNER.

Tallahassee, Fla., June 30, 1925.

Honorable W. S. Cawthon,
State Superintendent of Public Instruction,
Tallahassee, Fla.

Dear Sir:

I beg leave to make this report of my work as state rural school inspector for the year ending to-day.

REPORT FOR YEAR ENDING JUNE 30, 1925.

Sumter	—	—	—	—	0
Volusia	1	50	—	13	14
Totals	71	58	43	61	175

A school was given a certificate denoting that it was recognized as an accredited, or standard, elementary school, if, not having been previously so accredited, or standardized, it made a grade not less than eighty per cent in each of the six topics of the booklet used in grading, or if, having been previously accredited, or standardized, it made a grade not less than ninety per cent in each of the six topics just referred to, building, ground, equipment, teacher or teachers, school organization, and school community activities.

Several schools that did not merit accrediting at the time of my visit to them, were afterward accredited upon written application, the required improvements having been made in the meantime.

The oral information serving as a basis for accrediting some of the schools, was given by the superintendent or the rural school supervisor of the county, in each case.

Though every elementary school in these thirty-one counties was not visited and graded by me, none was necessarily left off our honor list on that account, for the superintendents were invited to grade their own schools, or to have their rural school supervisors or teachers grade them, and to apply for certificates for the schools meriting them. All needed blanks and information were furnished.

The list of accredited schools, with selected data upon them, accompanies this report.

REPORT FOR YEAR ENDING JUNE 30, 1925.

CIRCUMSTANCES ATTENDING THE VISITING AND
GRADING OF THE SCHOOLS

The county superintendent or rural school supervisor usually accompanied me. Sometimes one or more trustees or other patrons were present.

I habitually explained the grading of the school, in detail, to all present, pointing out just how the grades could be raised.

Nearly always I gave a copy of the grading to the teacher or principal and one to the superintendent. I frequently left a blank booklet with the teacher or principal, to be used in grading the school later in the term or the next year.

Sometimes, when circumstances seemed favorable, I spoke briefly to the school in favor of consolidation or other means of school improvement.

When there was time for it, I tested the pupils in some of their studies.

Sometimes I discussed with the teacher or teachers the course of study, the daily program, or other school topics.

At least once I attended a meeting of a parent-teachers' association, held immediately after the grading of the school and dismissal for the day.

Several times I hunted up one or more trustees and talked with them of the needs of their respective schools.

I continually gave special attention to conditions affecting hygiene and sanitation.

DISTRIBUTION OF LITERATURE.

To the teacher or teachers of every school visited, with only about a half dozen exceptions, I gave a package of assorted literature, on such topics as health, agriculture, home-making, thrift, prevention of fires, forest conservation, books for school libraries, organization and management of rural schools, and other matters. This literature was obtained from the State Board of Health, the State Department of Education, the State Department of Agriculture, the United States Public Health Service, the United States Department of Agriculture, the United States Bureau of Education, insurance companies, and other sources. The greater part of the literature—all that came from Washington—was got through the courtesy of Senator Fletcher. In previous years Congressman Clark had similar supplies sent.

To almost every teacher encountered in the schools I gave a copy of our "Miscellaneous Suggestions", now fifty-four in number. These "Suggestions" tell of an approved color scheme for the interior of a schoolroom; the journal and dues of the state association; addresses of publishers of all educational magazines of wide circulation in the United States; source of supplementary literature for use in teaching health, honesty, and good manners; sources of literature on parent-teacher associations and pupils' clubs; and so forth.

WRITING REPORTS ON SCHOOL AFFAIRS OF
FOUR COUNTIES.

At the beginning of the school year for which this report is made, I wrote reports on conditions and administration of the schools of four counties—Duval, Marion, Pinellas, and Taylor—taking about two months for the task. This completed a phase of my work of the year just previous, these four reports being the last and longest of a series of thirty-two similar reports, on as many counties. The reports treated such topics as consolidation of schools; transportation of pupils; number of schools of varying sizes, white and negro, and the history of the increase or decrease of this number; formation, number, size, consolidation, and suitability of special tax school districts, and the levy upon each; apportionment of the general school fund among the

schools of the county; uses of the district funds; scales of salaries of teachers; building programs; source of money used to pay for new buildings, insurance, and related items; lighting of school rooms; kind and condition of the school privies; health teaching in the schools and medical inspection of the pupils; compliance with and enforcement of the compulsory attendance law; flags at the schools; parent-teacher associations and other organizations serving the same purpose; enrollment of the teachers in the state association and in the national association; conventions of trustees; club work among the pupils; membership of the county in an association of a group of counties; notable achievements in school administration of the past few years; outlook and plans for the future. The data of these reports were generously given by the county superintendents, in personal interviews. Each report was written to the state superintendent, and a copy of it was given to the county superintendent.

WRITING ABSTRACTS OF TOPICS OF THE THIRTY-TWO REPORTS.

I have put together, in a form for convenient reference, the gist of the thirty-two reports referred to above, on the following topics: the compulsory attendance law, the light in classrooms, kind and condition of school privies, and flags at the schools. The summary of the first of these topics has already been submitted and has gone to the printer. Those of the other three accompany this report.

HELPED WRITE REPORT ON SCHOOL CONSOLIDATION.

I helped write a report on consolidation of schools in Florida, which has been published as a bulletin. The data for this report were collected the previous year by the two rural school inspectors.

HELPED WRITE BIENNIAL REPORT.

In this school year, I helped write the report of the rural school inspectors for the biennium ending June 30, 1924.

HELPED FINISH REPORT ON SCHOOLS OF MARION COUNTY.

I helped finish a report, begun before this school year, on a special study of the schools of Marion county. The report rendered, which accompanies this report, discusses two main topics—consolidation of schools and school finance—and several related topics, and gives an illustrated exhibit of the schools. Other phases of the schools of the county were studied by us, the two rural school inspectors, but, in order to keep the report here referred to from being too long, discussion of them was omitted from it.

WROTE A REPORT ON THE LIGHT IN CLASS- ROOMS.

I helped prepare a questionnaire for the purpose, and, when in each of the counties worked in this year, except four, I collected information on the location of the doors and windows of classrooms, and the consequent nature of the light in these rooms. This information was obtained partly from my own observation, but largely from the county superintendents, the scope of the inquiry including all of the school buildings of each county. The report rendered, with this report, quotes an eminent authority on the subject of light in classrooms, and gives my findings as to this in twenty-seven counties.

DID OTHER OFFICE WORK.

I made weekly and monthly reports of my work, and attended to correspondence as it came up. I answered, in the year, several questionnaires on the rural schools of the state, one of which required an answer of considerable length. I read quite a good deal of literature pertaining to rural schools.

ATTENDED CONVENTIONS.

I attended the convention of the State Education Association at Daytona, and that of the national association, at Washington, D. C.

SERVED AS JUDGE OF A SCHOOL EXHIBIT.

I served as one of the judges of the school exhibit at the annual county fair of Lee county, at Fort Myers.

TRAVELED 11,805 MILES.

In the work of the year, I travelled 11,805 miles—7,526 miles in automobiles, and 4,279 miles by rail. I travelled 6,855 miles in my own car, 466 miles in cars of county superintendents, 68 miles in taxis and hired cars, 137 miles in common carrier busses, 4,275 miles on railroad trains, and 4 miles on a railroad motor car.

In visiting schools, I used my own car nearly all the time. By this means, I was enabled to work more steadily than I otherwise could have done, and to carry to the schools most conveniently the literature mentioned above.

Respectfully submitted,

M. P. GEIGER.

STATE DEPARTMENT OF EDUCATION

Tallahassee, Florida

REPORT OF THE STATE RURAL SCHOOL INSPECTOR

To the State Superintendent of Schools:

When the writer took up her duties as State Rural School Inspector on August 19, 1925, she began to survey the field with the view of seeing it as a whole. Two weeks were spent in studying all available information found in the State Superintendent's office in order to analyze the job and determine what was to be done, and to find the most economical way in which to do it. However, out of this data a few problems were selected for the year. One or two things done well and carried to completion is far more valuable than many pursued in a superficial manner.

Since members of a State Department Staff have such a wide and varied field in which to function, it makes it even more necessary for State Supervisors to have a well planned program than supervisors in a more limited field. Otherwise they will find themselves peddling unassorted

wares. A supervisory program must possess three essential elements:

1. Definite objectives growing out of the needs of the situation. These objectives must be of vital concern in raising the educational status of the state as a whole.

2. Centralizing agencies which have far-reaching influence through which the supervisor's energies are radiated in such a manner that there will be the least amount of waste energy possible.

3. An adequate means of determining the effectiveness of the program.

With the above essential in mind the writer outlined her program for the year, which is given in brief below.

OBJECTIVES

Since the business of the school is to instruct the youth, some phase of the improvement of instruction seemed the most logical point of attack. The improvement of reading for special emphasis with the view of launching a State-wide Program in Reading was selected as the primary objective.

For the past four years the former Rural School Inspectors had been promoting standardization of elementary schools. Realizing that this movement had been a strong factor in building up the physical environment of the schools it was decided to continue this program.

Believing in the idea expressed by the former Rural Inspectors, the 1924 plans were revised. "These requirements will not remain fixed, but as educational progress takes place and as the number of accredited schools increases, they will from time to time be raised." In co-operation with the Elementary Supervisor, tentative plans were made for revising these standards. These plans were sent to all the superintendents and principals in the state for their criticisms. The results of this inquiry were compiled in a somewhat coherent form and with the tentative plans were put before a committee consisting of leading teachers, supervisors, principals, and superintendents of the state. The standards were formulated on the following principles:

1. The purpose of standardization of elementary schools is to provide for better physical conditions, better instruction, and to make the school a community center.

2. The standards should have minimum requirements.
3. The standards should be a joint product of all people who are concerned.
4. The standards must be adapted to the educational status of the state.
5. The standards are to be used as a guide for school improvement rather than an imposed authority from the State Department.

A copy of "Standards for Florida Elementary Schools" is included in this section.

The demonstration of the value of county supervision was a guiding factor in shaping the policies of the program.

In addition to the above, which were of a state-wide nature, attention was given to such problems as consolidation, building programs, etc.

AGENCIES

The outstanding agencies through which the supervisory objectives were promoted may be grouped under a few general heads:

1. Visits to Counties.
2. Office-Follow-Up Work.
3. Extension Course.
4. District and State Education Associations.

Visit to Counties.—Upon invitation from the county superintendent the writer went to his county and spent approximately one week with him in visiting his schools. Before leaving the State Department of Education records were searched for detailed data on the county to be visited. This was very valuable in that it gave a background for the grasp of the situation.

The policy of having a well organized program worked out in cooperation with the superintendent before going into the county has proved to be economical. Each school which is to be visited should be notified in advance by the county superintendent. This will enable the teachers to have their problems formulated and ready for discussion. The teachers must not be made to feel that they are being tried by the "powers that be," but that the supervisor and superintendent come as advisors.

The following "Program for the Week" indicates type of activities carried on while in field work.

PROGRAM FOR THE WEEK

MONDAY 1.—Conference with the county superintendent for the purpose of getting a general understanding of the administration of the schools of the county.

2.—Walnut Hill School (one teacher)—Number of daily recitations reduced from thirty to eighteen. Suggestions were made with reference to a few physical changes. Observation of two reading classes after which the writer gave a demonstration of a silent reading lesson. This was followed by a conference with both the superintendent and teacher.

3.—Mayberry School (ten teachers). Outstanding problems discussed with the principal; permanent records, an efficient scheme for classification, and the reading situation within the school. Observed with the principal reading recitation. The need of more silent reading was outlined with the teachers in a faculty meeting.

TUESDAY.—A one and a three teacher school were tested with the Thorndike-McCall Reading Scale. The results were interpreted to the teachers.

WEDNESDAY 1.—Walnut Hill School (six teachers)—Talked to pupils at opening exercises. Checked school for standardization. Miscellaneous class room visiting. Special attention given to reading.

2.—Vista School (one teacher) General supervision. Checked for standardization.

THURSDAY—Palmetto School (eight teacher school)—A two hour conference during which time individual teachers came with questions for advice. In most instances they asked, "Can you tell me why Sammy does not learn? I give more help to him than to any one else." Gave reading test to pupils in third to eighth grades. The results were checked and tabulated with the aid of the teachers. Results were interpreted.

FRIDAY—Compiled and graphed results found on reading situation in the county. Spoke at the P. T. A.

SATURDAY 1.—County Teachers' Meeting—Teachers were urged to improve their teaching methods in reading, and to encourage the pupils to read more books before they were promoted. A large number of teachers registered for the extension course, "Technique of Teaching Reading," which is given by the Extension Division of the University of Florida.

2.—The Elementary Standards were discussed.

In counties where supervisors were employed the writer worked directly with them by helping them plan their supervisory program. Then too, the technique of supervision was analyzed through actual demonstrations out in the field. Such as; school room visitation, group teachers' meetings, county teachers' meetings, and the use of tests and measurements in the improvement of instruction.

Office-Follow-Up-Work—After returning from a field visit, letters, mimeographed material, and bulletins were sent to the superintendent in order to follow up and stimulate the program which had been initiated in the county.

Extension Course—The Extension Division of the University of Florida has been an invaluable agency in stimulating the proposed reading program. This division prepared a course in Technique of Reading. The course was conducted in the following manner.

(1) "In all schools of four or more teachers, this course will be handled by the Principal or Supervisor in teachers' meetings. In such cases, the Principal is sent the assignments to distribute to the teachers, and must keep a record of the class attendance, those taking part in the discussions, class leaders, etc. In other words, he shall make a report to us at the end of the course of the work each teacher has done and whether they have satisfactorily studied the course and gotten something out of it. No written assignments will be sent in to this office.

(2) In one or two teacher schools, where they can not have teachers' meetings and class discussion, the following method is to be used. Each teacher will enroll with this Division and the rec-

ord will be kept here. Each Assignment is to be written up and sent in, where it will be graded by our instructors. This will insure a careful study of the text by the individual teachers and we will know that they also have been benefited by the course.

This latter method seems to give the individual teachers more work, since they must write the answers to all questions. However, the class discussion is expected to cover these same questions as well as bring out additional benefits in points discussed that are not brought out in the texts. Under an enthusiastic and energetic Principal, the class method should be the better of the two.

(3) This course in Technique of Reading may be used toward an extension of certificate in this manner. It may take the place of reading course but will be twelve instead of the usual eight assignments. Each assignment will have to be written and sent in to this department. The additional work for extension will have to be taken, consisting of the correspondence course. The fee will be the same as usual, depending on whether the student comes under Plan 1 or Plan 2. Briefly, for an extension of certificate, the same work will be taken, as given in the bulletin, but the course in Technique of Reading may be substituted for the Reading course. For teachers already taking this course, it will mean a saving of two books, but will mean twelve instead of eight assignments in the Reading Courses."—Extension Division, University of Florida.

District and State Education Association—The above objectives were promoted through the District and State Education Association. This agency could be made to render the State Department a great service by the members of the State Department Staff and the Executive Committee of the Education Association working in conjunction with each other in planning the educational program for the state.

SOME RESULTS

The Reading Situation—During the past year a study was made of the reading situation in the elementary grades, including grades three to eight, of four counties. Typical schools were tested in other counties including the second grade and high school grades. The results obtained reveal the fact that the reading in these schools was far below standard in this subject.

RESULT OF READING SURVEY IN FOUR COUNTIES.

COUNTIES	III	IV	V	VI	VII	VIII
I	0*	0	3	3	11	19
II	2	3	6	9	9	6
III	0	5	0	5	0	13
IV	4	6	8	14	14	13

* Number of months below standard in Reading.

With the above information gathered from the field the writer took for her text, "To improve the reading situation in the State of Florida; (1) the teachers must improve their technique of teaching reading, (2) there must be plenty of easy reading material for the pupils."

In order to test out the above theory, demonstrations were carried on in two counties for a period of seven months and in a large graded school for four months. The results are given below.

RESULTS OF AN EXPERIMENTAL READING PROGRAM.

GRADE	III	IV	V	VI	VII	VIII
County No. I	9*	8	10	15	10	18
County No. II	12	9	10	15	40	18
Graded School	6	5	10	12	14	13

* Number months Improvement.

The State-Wide Program has developed thus far, (1) Evidence is on file showing the need of such a program. (2) A method of procedure has been demonstrated. (3) The Annual Principals' Conference adopted a resolution endorsing the movement. This conference appointed a committee for the purpose of preparing suggestive plans for the program. These plans are to be ready for distribution to all superintendents and principals by the first of September.

The Need of County Supervision.—The State of Florida should be made to realize the drastic need of county supervision for the elementary schools. The number of teachers

with low grade certificates, which indicates that they have had less than high school training, alone warrants this statement. Second, the great turn-over of teachers each year makes it impossible, even though teachers are well trained and stay on their jobs a reasonable length of time, for the pupils to attain the minimum essentials. Teachers are human beings and need encouragement and guidance.

Can one conceive of a business enterprise, where even less money is spent in the operation of it than is spent for the schools of the state, which does not have supervision? Do the people of the state, in whom the power has been vested to spend the school money know that they are getting value received for this money, or do they just "hope" they are?

An age grade study of the state would reveal the fact that there are hundreds of children retarded. One of the outstanding contributing causes of this is the inefficient haphazard teaching. A pupil has the right to be promoted from grade to grade unless there is some reason which can not be controlled by the teacher. Testing programs have revealed the fact that more children have good intelligence quotients than are sometimes thought.

A well trained county supervisor, realizing her function as outlined below, can earn far more for the tax payers than they have to spend for her services. "The function of the supervisor is increasing the effectiveness of the teacher by making desirable changes in what she is and as a consequence, in what she does; to discover the potentialities and develop them; to stimulate fruitful growth; to help superior teachers in systems reach maximum usefulness; to help teachers in their practical reorganization of her theories; to give the teacher the needed training in teaching which must be given while she is in service." —Fannie Dunn.

An investigation made of the reading situation of two counties in the state has given some concrete evidence as to the value of supervision.

READING SURVEY IN TWO COUNTIES.

A Comparison of the Reading Situation in Two Counties:

GRADE	III	IV	V	VI	VII	VIII
(Sup. yes)						
No. 1	0*	5	0	5	0	13
(Sup. no)						
No. 2	4	6	8	14	14	13

* Number of months below standard.

In County No. 1 there was one person, who had for three years, been both Attendance Officer and County Supervisor. In County No. 2 the County Superintendent was the only person who visited the schools.

(1) The above table shows that the supervised county has three grades which are up to the national standard. In the unsupervised county there is no grade up to standard.

(2) After seven months a second survey was made of both counties in order to make a comparison of accomplishments. The supervised county made an average progress of eleven months during this period while the unsupervised county made nine months progress.

At present there are seven people in the state who are employed in the capacity of supervisor. Four of these, however, do attendance work in addition to this work. Since the demonstration of the value of supervision was fundamental in constructing this state supervisory program, the writer, believing that the supervisors in the field could render a great service in giving concrete evidence of the value of supervision, began to search for ways and means of improving and utilizing this agency. The following steps were outlined as an initial procedure. It was not anticipated, however, that all of these steps would be developed at once, but that some of them would be an outgrowth of others.

1. Visiting the supervisor in the field.
2. Exchange of visits among the supervisors.
3. A Supervisors' Section at the Florida Education Association.
4. Supervisors to attend national meetings.
5. A monthly news letter, which is a compilation of activities of supervisors in the field.
6. Supervisors to write articles pertaining to their activities for the Journal of the Florida Education Association.
7. An Annual Supervisors' Conference.
8. An Annual Supervisors' Bulletin, published by the State Department of Education.

Twenty-four per cent of the time in the field was spent with the supervisors in helping them plan a constructive program, and develop a sound technique for the administration of it. When possible concrete demonstrations were used for a basis of discussion rather than making it a matter of theory. For example, in one county the writer worked with the supervisor in promoting; a county-wide teachers' meeting, a group teachers' meeting, a faculty meeting, and school room visiting.

During the past year four visits were made by county supervisors into other counties for the purpose of observing demonstrations which were being conducted by the writer and the supervisor of that particular county.

A supervisors' section was organized at the Florida Education Association. The program for this meeting dealt with the subject of the Technique of Supervision. During this same association a supervisors' breakfast was held for the purpose of giving the supervisors an opportunity to get acquainted in a social way.

Two supervisors attended the Supervisors' Conference of the Southeastern States, which met at Peabody College on December 14th and 15th, 1925. One supervisor attended the N. E. A. which met in Washington, D. C. last February.

There has been some exchange of news items among the supervisors, however, the news letter has not been started. Two supervisors have prepared articles for the Journal of the Florida Association. Others are in the process of development.

Plans have been made for both an annual Supervisors' Conference and an annual Supervisory Bulletin, but have not as yet been executed.

In cooperation with the United States Bureau of Education, the writer has begun a study of the distribution of the time which the county supervisor devotes to her professional duties. The average time distribution for April is as follows:

Activities	Percentage of time spent in each.
1. Supervisory visits to classrooms (include conferences with individual teachers).....	35.5
2. Travel	12.5
3. Teachers' meetings	5.7
4. Community activities not directly concerned with school programs	5.5
5. Office and clerical work—Preparation of circulars, letters, reports, correspondence, checking tests, etc.	18.9
6. Other work, Name activities (such as professional improvement) and give percentage of time devoted to each	14.3
7. Attendance work	7.6

NOTE.—Four supervisors reported time spent in attendance work.

A PROMOTION SCHEME UTILIZING TEACHER'S MARKS, MENTAL AND EDUCATIONAL TESTS—GRADES 7-8.

A demonstration of a scientific promotion scheme was made in Putnam County, utilizing teacher's marks and mental and educational tests, in grades seven and eight. This scheme in detail could be used through the third grade.

Teacher's Estimate.—The rank that each pupil should have according to the teacher's judgment, was obtained through the use of a simple Teacher's Estimate sheet shown in Figure 1. These estimates were secured before any testing, or at least before the teachers had seen the pupils' scores on the tests.

Fig. 1. TEACHER'S ESTIMATE SHEET—Grade IV.

NAME (Alphabetically arranged)	Attendance, 24-25, 25-26.	Grades Repeated.	Ch. Age.	Yrs. Mos.	Habits, Attitudes.	Health.	Grade Average.	Rank in Class.	Would You Promote?
Adams, Sarah	152		10	1	B	A	B	4	Yes
Back, John	49	III	10	7	D	B	E	27	No
Edwards, Sarah	141 132	I, II, IV	13	5	D	C	D	23	Yes

Teacher's Estimate.—The teacher's estimate sheet should be filled out by the classroom teacher and given to the principal on the day of the testing program.

Attendance.—The school cannot educate unless the pupil presents himself for instruction every day. It is generally accepted that when a pupil is irregular in attendance that he is not up to par from the standpoint of habit, attitude, and knowledge of the school subjects. Attendance, therefore, should influence his rank in class (See record of John Black).

Grades Repeated.—The number of grades repeated during the school life should have some weight in helping the teacher formulate her judgment. If the pupil has been regular in promotion this would indicate, other things being equal, that he should be promoted. (See record of Sarah Adams and Sarah Edwards.)

Chronological Age.—Is the pupil too old for the grade, too young, or has he made normal progress?

Habits and Attitude.—Does the pupil work intelligently? Has he leadership? Has he the ability to cooperate with the group? Has he respect for the rights of others? Is he responsible for self and to others? List all pupils from the lowest to the highest from the standpoint of habits and attitudes, grade the pupils who rank highest "A" and the next group B, C. and D respectively.

Health.—The general health, the knowledge of health habits, and the personal health habits are fundamental in arriving at teacher's estimate. (Grade as for habits and attitudes.)

Average Grade.—After making a careful study of all the data on the Teacher's Estimate Sheet, the teacher should rank the pupil No. 1 who stands highest in her estimation. The second highest No. 2, etc. If there are thirty in the class, the one who ranks lowest would be ranked No. 30. No percentage weight is given for each item since this matter is left to the judgment of the teacher.

Would you Promote.—After all the pupils have been ranked, the question as to whether or not a pupil should be promoted must be given serious consideration. The decision must be based on information found on the Teacher's Estimate Sheet.

Remarks.—State outstanding strong or weak points relative to pupils' knowledge, habits, and attitude.

The Pedagogical Age.—The rank in class is converted into Pedagogical Age and used in determining promotion.

FIG. 2. MENTAL TEST SHEET—GRADE IV.

NAME. (Arranged by scores)	Total Score.	Ch. Age.		Yr. Mo.		Int. Quo.	Percentile Rating.	Rank.	Grade Norm.
		Yr.	Mo.	Yr.	Mo.				
Adams, Sarah	100	10	1	11	11	118	77	C-H. Av.	Low 6
Black, John	74	13	5	10	5	78	9	D-Inf.	High 4
Edwards, Sarah	51	10	7	8	10	83	21	C-L. Av.	High 3

In finding the mental age, representing native ability to do school work, the National Intelligence Test Scale A was used.

For computing the Educational Age, representing pupils' acquired ability or achievement, the following tests were given; Thorndike-McCall Reading Scale, the Woody Arithmetic Scale, Series B, the Buckingham Reasoning Scale and the Morrison-McCall Spelling Scale.

Reading was weighted doubly, while the other subjects were given single weighting. Formula: Educational Age = 2 Read A + Fund A + Reas A + Sp'l. Divided by 5.

FIG. 3. EDUCATIONAL TEST SHEET—GRADE IV.

	Reading.			Reasoning.		
	No. Rt.	Age.	Gr. Ab.	Sc.	Age.	Gr. Ab.
Adams, Sarah	22	147	6.2	45	121	4.3
Black, John	17	121	4.5	45	121	4.3
Edwards, Sarah	15	115	4.5	35	107	3.3

FIG. 3. EDUCATIONAL TEST SHEET—GRADE IV—(Continued.)

	Fundamentals.			Spelling.			Educational.		
	Sc.	Age.	Gr. Ab.	No. Rt.	Age.	Gr. Ab.	Age.	Gr. Ab.	Rank.
Adams, Sarah	34	117	4.1	24	128	4.5	130	5.1	2
Black, John	33	114	3.8	19	118	3.7	119	4.3	25
Edwards, Sarah	43	131	5.2	21	122	4.1	118	4.2	27

The Pedagogical Age, representing the teacher's judgment of the pupils past achievement and his ability to make progress in the future, was obtained by using the highest educational age made by any member of the class as the pedagogical age of the pupil ranked highest by the teacher. The second highest educational age was used as the pedagogical age of the pupil ranked second, etc.

The Promotion Age used as the basis for classification was obtained by giving equal weighting to the mental, educational and pedagogical ages.

Pro. Age = Ped. A. + M. A. + Ed. A. Divided by 3.

FIG. 4. PROMOTION SHEET—GRADE IV.

NAMES (Alphabetically arranged)	Teacher's Estimate.		Mental Test.		Promotion.				
	P Age.	Rk.	M Age.	I.Q.	Ed. Age.	Age.	Quo.	Gr.	Sc.
Adams, Sarah	129	4	143	118	130	134	111	5	A
Black, John	109	27	106	83	119	111	88	4	B
Edwards, Sarah	161	23	125	78	118	121	75	5	B

SUMMARY OF GENERAL INFORMATION

August 19, 1925—May 31, 1926

REPORT OF STATE SUPERVISOR OF ELEMENTARY SCHOOLS

A STATEMENT OF OBJECTIVES

Upon being appointed State Supervisor of Elementary Schools it was my first thought to become familiar with the duties involved in the position, and to plan the work in such a way as to make the supervision of all the elementary schools—both urban and rural—of real benefit to the cause of education in Florida.

A study of the situation made the following objectives seem most vitally important:

1. Improvement of the teaching of common school subjects.
2. Stimulation of professional growth among teachers.
3. Creation of a greater demand for professionally trained teachers.
4. Demonstration of the need for supervision of classroom instruction, and the necessity for the employment of trained county supervisors.
5. A sympathetic understanding of the problems of the county superintendents.
6. Encouragement, where practicable, of consolidation of small schools to form larger and better ones.
7. Determination of how economically and how well the common school subjects are being taught.
8. Giving assistance to principals and teachers in better understanding the abilities of pupils, and their better classification according to ability.
9. Determination of how well the health of school children is being conserved.
10. Determination of how well the course of study for elementary schools is being followed.
11. Determination of how regularly pupils are attending school, and how rapidly they are advancing through their classes.
12. Discovery of how well physical conditions in and around schools are conducive to good school work and the moral training of children.

OBJECTIVES LIMITED

It soon became evident that the combined efforts of the supervisor of elementary schools and the rural school inspector could not make possible an effective visit to every county in the state during the year; nor was it thought practicable to attempt the accomplishment of too many objectives during a given year.

Having been asked to address groups of teachers in district meetings throughout the state, the supervisor of elementary schools gladly accepted as many of these invitations as possible, deeming it a wonderfully fine opportunity to meet a large number of teachers, and to be able to confer with them as to the best means of furthering the cause of elementary education in Florida.

No fixed itinerary of counties was attempted for this year, though many counties were visited, but the supervisor accepted invitations to do some definite pieces of work in certain cities, towns, and counties.

A COUNTY SURVEY

Upon the invitation of the County Superintendent and Board of Public Instruction of Gadsden County an educational survey of that county was carried on during the month of November and the first week in December 1925. The following general purposes were decided upon before the survey was begun, and were as closely as possible adhered to in the actual work of the undertaking:

1. To determine how well the schools of Gadsden County are administered and supervised.
2. To tell how well the schools of the county are keeping their pupils in schools.
3. To tell how well the pupils of the county are progressing through their grades.
4. To determine the preparation, experience, and general fitness for their work of the teachers of the county.
5. To find how well the teachers are being paid for their services.
6. To measure both the teaching product of the schools and the ability of the pupils to do school work.
7. To compare the teaching product in rural schools with that in town schools.

8. To determine how well the buildings, grounds, equipment, and surroundings are adapted to school purposes.

9. To find the cost per pupil in average daily attendance, and to determine whether the schools, as now conducted, are worthy of continuation.

10. To propose a program of consolidation of schools for the entire county, and to show the advantages and costs of the same.

SCOPE OF THE SURVEY

Every white school in the county, rural, and urban, was visited, the buildings, grounds, and equipment observed and measured, and a battery of standard tests administered to all elementary pupils above the first grade, and in a few cases to high school pupils. The examination of no school was accomplished in less than one day, and in some of the larger schools as much as three or four days was required.

The rural school inspector assisted in this survey work for about two weeks, and school officials, principals, teachers, and advanced high school pupils of the county rendered efficient service during the entire five weeks of the undertaking.

A publication has been prepared giving in detail the results of this county survey and the reader is referred to Bulletin No. 2, Vol. III, Florida State Department of Public Instruction, October 1926, for further information upon this subject.

STANDARDS FOR ELEMENTARY SCHOOLS

Realizing early in the school year that there was an increasing need for the standardization of elementary schools, and that the standards already in use were not to be considered fixed, but in the language of one of the former State Rural School Inspectors, and author of those standards—"As educational progress takes place, and the number of accredited schools increases, they (the standards) will from time to time be raised", it was decided by the elementary supervisor and the rural school inspector to inaugurate plans for such changes in the regulations as were necessary to meet the growing needs of the schools. Tentative regulations were drawn up and mimeographed copies sent to all county superintendents and principals,

and to as many teachers as could be reached, and all were asked to send in to the State Department all possible criticisms and suggestions for improving the standards. Conferences were held with groups of superintendents, supervisors, and teachers, and these discussed the proposed standards, and suggested changes and improvements. Finally standards for Elementary Schools were drawn up and adopted by the State Board of Education, February 1, 1925. As will be seen from the Standards which are here reproduced all elementary schools of the state are divided into four groups, as follows:

Group I, Schools of ten or more teachers.

Group II, Schools of six to nine teachers.

Group III, Schools of three to five teachers.

Group IV, Schools of one or two teachers.

Each group must meet certain "required items" that are enumerated, but it will be noted that the requirements for small schools are less extensive and easier to be met than those of the larger schools. In addition to the "required items" each school before being considered a "standard school" must meet at least twenty-five per cent of the "flexible points" enumerated following the requirements for Group IV. A school meeting all the "required" standards and seventy-five per cent of the "flexible" points is to be classed as a "Superior School."

STANDARDS FOR FLORIDA ELEMENTARY
SCHOOLS

STATE OF FLORIDA

DEPARTMENT OF PUBLIC INSTRUCTION
1925—1926

GROUP 1.

(Schools of ten or more teachers)

REQUIRED ITEMS.

LOCATION—

1. Accessible to all the children to be served by the school.
2. As far removed as possible from all distracting noises or other disturbing influences.

GROUNDS—

1. Free from all trash and rubbish.
2. Neat waste paper receptacles.
3. Flagstaff, with flag displayed.
4. At least five pieces of playground equipment.
5. Grounds well cared for.
6. If fences are provided, they must be neat, attractive, and in good repair.

BUILDING AND ROOMS—

1. Adequate building with a modern classroom for each teacher.
2. Building well constructed, painted and in good repair.
3. Adequate means for locking doors and windows.
4. Room adapted to assembly purposes for school and community gatherings.
5. Each room must have at least fifteen square feet of floor space for each pupil enrolled; must have window

space equal to at least one-fifth of the total floor space; and light must fall over the left shoulders of the pupils. (Light from both the left side and the rear of the room is permissible, but from the left side only is the better arrangement.)

6. The ceiling of the room must not be less than eleven nor more than thirteen feet above the floor. The windows should extend well up toward the ceiling, and each window sill should be at least three feet above the floor. All sashes must be adjustable by means of some approved method.

7. Window shades must be translucent, and in good condition. (Shades that can be lowered from the top as well as raised from the bottom are to be preferred.)

8. Walls of the room tinted or painted a light gray, buff, tan or other light shade, and the ceiling a lighter hue.

9. At least thirty lineal feet of slate or composition board, at least three feet wide, and properly placed for each classroom.

10. A well-lighted, well-ventilated, cloakroom for each classroom unless individual lockers or other adequate means of caring for hats and coats are provided.

11. Two sanitary, well-screened outbuildings, one for boys and one for girls—meeting fully the requirements of the State Board of Health—must be provided and maintained, or in case inside closets are used these must be sanitary, well-lighted and well-ventilated.

12. Adequate provision for cleaning buildings and grounds is required.

13. Fire escapes as provided for by the laws of Florida.

EQUIPMENT—

1. Each classroom must be supplied with a sufficient number of single desks of the right size to accommodate the children enrolled, and the desks must be properly placed.

2. A teacher's chair, desk and wastebasket for each classroom.

3. A book-case for supplementary readers, reference books, etc. for each classroom.

4. A library of at least 40 books per teacher for the exclusive use of the elementary grades shall be required for the school year 1926-27, 50 books per teacher for 1927-28, and 60 books per teacher for 1928-29.

5. In the first grade two sets of supplementary readers (15 copies to the set) shall be required, and in all other grades three sets.

6. A globe at least 12 inches in diameter and a set of five wall maps, including a map of Florida, for each room, grades 4-8. (A globe to be suspended from the ceiling is preferable.)

7. At least two appropriate wall pictures for each room.

8. A dictionary to be owned by every child in grades 4-8, or a set of twenty (owned by the school) in each room.

9. A desk dictionary for each teacher.

10. An unabridged dictionary for the use of grades 7 and 8.

11. The water supply must be adequate, pure and supplied by means of bubbling fountains, or by covered cooler with spigot and sanitary individual drinking cups.

12. Facilities for washing hands and faces and individual sanitary paper towels.

13. A first aid room shall be provided, and a fully equipped first-aid outfit constantly kept for emergencies.

14. Scales for weighing pupils at regular intervals.

15. The school shall have at least one phonograph, with fifteen well selected records, a piano, or an organ.

16. Adequate heating facilities.

17. A bulletin board in each room.

18. Special equipment for primary work, to the value of \$5.00 per room.

19. A set of weights and measures.

TEACHERS—

1. At least ten full-time teachers exclusive of the principal.

2. At least one-half of all the elementary teachers for the school year 1926-27 must be holders of Florida Primary, Florida First Grade, Florida Graduate State, or Florida Special Certificates. Beginning with the school year 1927-28 three-fourths of all teachers must be holders of certificates not lower than those above mentioned.

3. No teacher shall hold a certificate lower than the second grade, and it is to be understood that requirements with reference to qualifications of teachers will be raised as rapidly as possible.

4. Each teacher must demonstrate good technique of teaching, and give evidence of professional preparation and growth.

5. Each teacher is to subscribe for and read at least one professional magazine, read regularly a daily newspaper, and read at least two professional books during the year.

6. Teachers are to prepare and carry out programs for all special days as suggested in the Elementary Course of Study and the Florida School Laws.

7. A daily schedule shall be posted in a conspicuous place in each classroom.

8. Lesson plans must be made by every teacher.

9. The objectives for individual subjects as outlined in the State Elementary Course of Study must be attained.

10. Teachers are to supervise playground activities of pupils at recesses and before and after school.

INSTRUCTION—

1. The term of school shall be at least eight months, or 160 days. A minimum term of nine months or 180 days is urgently recommended.

2. There must be evidence that instruction is being vitalized by each and every teacher in accordance with the State Elementary Course of Study.

3. There are to be periods of supervised study every day.

4. Diagnostic standard tests in at least two subjects are to be given each year, and evidence shown that remedial work is provided for those pupils found to be below standard. Provision must also be made to ensure progress of those pupils found to be above standard.

5. Pupils must be classified according to their ability to do school work.

6. Evidence is to be given that the right amount of time is being devoted to each subject in the curriculum.

7. Every elementary teacher of a grade must give training in health work and in citizenship, and in case of departmental teaching, the appropriate teachers must do this work.

8. There must be a physical examination of elementary children at least once each year, and evidence that the necessary follow-up work has been done.

9. Use of a daily newspaper is to be made in grades 5-8.

10. Evidence of clean and systematic housekeeping—pupils participating—must be shown.

11. Pupils to take active part in devotional and other exercises.

RECORDS AND REPORTS—

1. A well-planned system of individual records throughout the grades, beginning with the first.

2. Reports made at regular intervals to parents, attendance officers, and other school officials.

ENROLLMENT, ATTENDANCE AND PUNCTUALITY—

1. The average daily attendance must be at least 80% of the enrollment.

2. There must not be more than 5% of tardiness for any month during the school year previous to standardization.

3. No teacher shall have more than 40 pupils.

THE COMMUNITY—

1. A parent-teacher or similar organization in connection with the school.

2. At least two public entertainments during the year, in which as many pupils as possible participate.

3. The school to be visited by each trustee or the local supervisor at least twice during the school year.

MISCELLANEOUS—

1. Evidence of a wholesome pupil-teacher relationship existing in the school.

2. At least two extra-curricula activities, as for example, Boys and Girls Club, Junior Red Cross, Literary Societies, etc.

3. No school in which high school subjects are being taught can be considered a standard elementary school unless the requirements for a standard high school are also being fully met.

4. Fire drills, as provided for by the laws of Florida, at frequent intervals.

GROUP II.

(Schools of six to nine teachers.)

REQUIRED ITEMS

LOCATION—

1. Easily accessible to all children to be served by the school.
2. As far removed as possible from all distracting noises or other disturbing influences.

GROUNDS—

1. Free from all trash and rubbish.
2. Neat waste paper receptacles.
3. Flagstaff, with flag displayed.
4. At least four pieces of play ground equipment.
5. Grounds well cared for.
6. If fences are provided they must be neat, attractive and in good repair.

BUILDINGS AND ROOMS—

1. Adequate building with a modern classroom for each teacher.
2. Building well constructed, painted and in good repair.
3. Adequate means for locking doors and windows.
4. Room adapted to assembly purposes for school and community gatherings.
5. Each room must have at least fifteen square feet of floor space for each pupil enrolled; must have window space equal to at least one-fifth of the total floor space, and light must fall over the left shoulders of the pupils. (Light from both the left side and the rear of the room is permissible, but from the left side only is the better arrangement.)
6. The ceiling of the room must not be less than eleven feet, nor more than thirteen feet above the floor. (The windows should extend well up toward the ceiling, and each window sill should be at least three feet above the floor.) All sashes adjustable by means of some approved method.

7. Window shades must be translucent, and in good condition.

8. Walls of the room tinted or painted a light gray, buff, tan or other light shade, and the ceiling a lighter hue.

9. At least thirty linear feet of slate or composition blackboard, at least three feet wide, and properly placed for each classroom.

10. A well-lighted, well-ventilated cloakroom for each class room unless individual lockers or other adequate means of caring for hats and coats are provided.

11. Two sanitary, well-screened outbuildings, one for boys and one for girls—meeting fully the requirements of the State Board of Health—must be provided and maintained, or in case inside closets are used, these must be sanitary, well-lighted and well-ventilated.

12. Adequate provision for cleaning buildings and grounds is required.

13. Fire escapes as provided for by the laws of Florida.

EQUIPMENT—

1. Each classroom must be supplied with a sufficient number of single desks of the right size to accommodate the children enrolled, and the desks must be properly placed.

2. A teacher's chair, desk, and wastebasket for each classroom.

3. A bookcase for supplementary readers, reference books, etc.

4. A library of at least 30 books per teacher for the exclusive use of the elementary grades is required for the school year 1926-27, 40 books per teacher for 1927-28, and 50 books per teacher for 1928-29.

5. In the first grade two sets of supplementary readers (15 copies to the set) shall be required, and in all other grades three sets.

6. A globe at least 12 inches in diameter, and a set of five wall maps, including a map of Florida, for each room, grades 4-8. (A globe, to be suspended from the ceiling, is preferable.)

7. At least two appropriate wall pictures for each room.

8. A dictionary to be owned by every child in grades 4-8, or a set of twenty (owned by the school) in each room.

9. A desk dictionary for each teacher.

10. An unabridged dictionary for the use of grades 7 and 8.
11. A fully equipped first-aid outfit must be constantly kept for emergencies.
12. The water supply must be adequate, pure and supplied by means of bubbling fountains, or by covered cooler with spigot and sanitary individual drinking cups.
13. Facilities for washing hands and faces and individual sanitary paper towels.
14. Scales for weighing pupils at regular intervals shall be provided.
14. The school shall have at least one phonograph, with fifteen well selected records, a piano, or an organ.
16. Adequate heating facilities.
17. A bulletin board in each room.
18. Special equipment for primary work to the value of \$5.00 per room.
19. A set of weights and measures.

TEACHERS—

1. At least six full-time teachers exclusive of the principal.
2. At least one-half of all the elementary teachers must for the school year 1926-27 be holders of Florida Primary, Florida First Grade, Florida Graduate State, or Florida Special Certificates. Beginning with the year 1927-28 three-fourths of all teachers must be holders of certificates not lower than those above mentioned.
3. No teacher shall hold a certificate lower than the Second Grade, and it is to be understood that requirements with reference to qualifications of teachers will be raised as rapidly as possible.
4. Each teacher must demonstrate good technique of teaching, and give evidence of professional preparation and growth.
5. Each teacher is to subscribe for and read at least one professional magazine, read regularly a daily newspaper, and read at least two professional books during the year.
6. Teachers are to prepare and carry out programs for all special days as suggested in the Elementary Course of Study and the Florida School Laws.
7. A daily schedule shall be posted in a conspicuous place in each classroom.

8. Lesson plans must be made and kept by every teacher.
9. The objectives for individual subjects as outlined in the State Elementary Course of Study must be attained.
10. Teachers are to supervise playground activities of pupils at recess and before and after school.

INSTRUCTION—

1. The term of school shall be at least eight months or 160 days. A minimum term of nine months or 180 days is urgently recommended.
2. There must be evidence that instruction is being vitalized by each and every teacher in accordance with the State Elementary Course of Study.
3. There are to be periods of supervised study every day.
4. Diagnostic standard tests in at least two subjects are to be given each year, and evidence shown that remedial work is provided for those pupils found to be below standard. Provision is also to be made to ensure progress of those pupils found to be above standard.
5. Pupils must be classified according to their ability to do school work.
6. Evidence is to be given that the right amount of time is being devoted to each subject in the curriculum.
7. Every elementary teacher of a grade must give training in health work and in citizenship, and in case of departmental teaching, the appropriate teachers must do this work.
8. There must be a physical examination of elementary children at least once each year, and evidence that the necessary follow-up work has been done.
9. Use of a daily newspaper is to be made in grades 5-8.
10. Evidence of clean and systematic housekeeping—pupils participating—must be shown.
11. Pupils to take active part in devotional and other exercises.

RECORD AND REPORT---

1. A well-planned system of individual records throughout the grades, beginning with the first.
2. Reports made at regular intervals to parents, attendance officer, and other school officials.

ENROLLMENT, ATTENDANCE AND PUNCTUALITY—

1. The average daily attendance must be at least 80% of the enrollment.
2. There must not be more than 5% of tardiness during any month of the year, previous to accrediting .
3. No teacher shall have more than 40 pupils.

THE COMMUNITY—

1. A parent-teacher or similar organization in connection with the school.
2. At least two public entertainments during the year, in which as many pupils as possible participate.
3. The school to be visited by each trustee or the local supervisor at least twice during the school year .

MISCELLANEOUS—

1. Evidence of a wholesome pupil-teacher relationship existing in the school.
2. At least two extra-curricula activities, as for example Boys and Girls Clubs, Junior Red Cross, Literary Societies, etc.
3. No school in which high school subjects are being taught can be considered a standard elementary school unless the requirements for a standard high school are also being fully met.
4. Fire drills, as provided for by the laws of Florida, at frequent intervals.

GROUP III.

(School of three to five teachers.)

REQUIRED ITEMS.

LOCATION—

1. Accessible to all the children to be served by the school.
2. As far removed as possible from all distracting noises or other disturbing influences.

GROUNDS—

1. Free from all trash and rubbish.
2. Neat waste paper receptacles.
3. Flagstaff, with flag displayed.
4. At least three pieces of playground equipment.
5. Grounds well cared for.
6. If fences are provided they must be neat, attractive, and in good repair.

BUILDINGS AND ROOMS—

1. Adequate building with a modern classroom for each teacher.
2. Building well constructed, painted and in good repair.
3. Adequate means for locking doors and windows.
4. Room adapted to assembly purposes for school and community gatherings.
5. Each room must have at least fifteen square feet of floor space for each pupil enrolled; must have window space equal to at least one-fifth of the total floor space, and light must fall over the left shoulders of the pupils. (Light from both the left side and the rear of the room is permissible, but from the left side only is the better arrangement.)
6. The ceiling of the room must not be less than eleven feet, nor more than thirteen feet above the floor. (The windows should extend well up toward the ceiling, and each window sill should be at least three feet above the floor.) All sashes must be adjustable by means of some approved method.
7. Window shades must be translucent, and in good condition. (Shades that can be lowered from the top as well as raised from the bottom are to be preferred.)
8. Walls of the room tinted or painted a light gray, buff, tan or other light shade, and the ceiling a lighter hue.
9. At least thirty linear feet of slate or composition blackboard, at least three feet wide, and properly placed for each classroom.
10. A well-lighted, well-ventilated cloakroom for each classroom unless individual lockers or other adequate means of caring for hats and coats are provided.

11. Two sanitary, well-screened outbuildings, one for boys and one for girls—meeting fully the requirements of the State Board of Health—must be provided and maintained, or in case inside closets are used these must be sanitary, well-lighted and well-ventilated.

12. Adequate provision for cleaning building and grounds is required.

13. Fire escapes as provided for by the laws of Florida.

EQUIPMENT—

1. Each classroom must be supplied with a sufficient number of patent desks of the right size to accommodate the children enrolled, and the desks must be properly placed.

2. A teacher's chair, desk and wastebasket for each classroom.

3. A bookcase for supplementary readers, reference books, etc., for each classroom.

4. A library of at least 30 books per teacher for the exclusive use of the elementary grades is required for the school year 1926-27, 40 books per teacher for 1927-28, and 50 books per teacher for 1928-29.

5. Pupils in grades 1 and 2 must read during the school year not less than four books—basal and supplementary. For each of the other grades there must be at least three sets of supplementary readers (one-half as many copies to the set as there are children enrolled in the grade at the beginning of the second month of school.)

6. A globe at least 12 inches in diameter, and a set of five wall maps, including a map of Florida, for each room, grades 4-8. (A globe to be suspended from the ceiling is preferable.)

7. At least two appropriate wall pictures for each room.

8. A dictionary to be owned by every child in the grades 4-8, or a set of twenty (owned by the school) in each room.

9. An unabridged dictionary for the use of grades 7 and 8.

10. The water supply must be adequate, pure and supplied by means of bubbling fountain, or by covered cooler with spigot and sanitary individual drinking cups.

11. Facilities for washing hands and faces.

12. A fully equipped first-aid outfit constantly kept for emergencies.
13. Pupils weighed at regular intervals.
14. The school shall have at least one phonograph, with ten well selected records, piano, or organ.
15. Adequate heating facilities.
16. A bulletin board in each room.
17. Special equipment for primary work to the value of \$2.00 per grade.

TEACHERS—

1. At least three full-time teachers exclusive of the principal.
2. At least one teacher of a three-teacher school, one of a four-teacher school, and two of a five-teacher school must be holders of Florida Primary, Florida First Grade, Florida Graduate State, or Florida Special Certificates.
3. No teacher shall hold a certificate lower than the Second Grade, and it is to be understood that requirements with reference to qualifications of teachers will be raised as rapidly as possible.
4. Each teacher must demonstrate good technique of teaching, and give evidence of professional preparation and growth.
5. Each teacher is to subscribe for and read at least one professional magazine, read regularly a daily newspaper, and read at least two professional books during the year.
6. Teachers are to prepare and carry out programs for all special days as suggested in the Elementary Course of Study and the Florida School Laws.
7. A daily schedule shall be posted in a conspicuous place in each classroom.
8. Lesson plans must be made and kept by every teacher.
9. The objectives for individual subjects as outlined in the State Elementary Course of Study must be attained.
10. Teachers are to supervise playground activities of pupils at recesses and before and after school.

INSTRUCTION—

1. The term of school shall be at least eight months, or 160 days. A minimum term of nine months or 180 days is urgently recommended.

2. There must be evidence that instruction is being vitalized by each and every teacher in accordance with the State Elementary Course of Study.

3. There are to be periods of supervised study every day.

4. Diagnostic standard tests are to be given in at least one subject each year, and evidence shown that remedial work is provided for those pupils found to be below standard. Provision also is to be made to ensure progress of those pupils found to be above standard.

5. Pupils must be classified according to their ability to do school work.

6. Evidence is to be given that the right amount of time is being devoted to each subject in the curriculum.

7. Every elementary teacher must give training in health work and in citizenship.

8. There must be a physical examination of elementary children at least once each year, and evidence that the necessary follow-up work has been done.

9. A daily newspaper in each school.

10. Evidence of clean and systematic housekeeping—pupils participating—must be shown.

11. Pupils take part in devotional and other exercises.

12. Instruction must be restricted to grades 1-8.

RECORDS AND REPORTS—

1. A well-planned system of individual records throughout the grades, beginning with the first.

2. Reports made at regular intervals to parents, attendance officer, and other school officials.

ENROLLMENT, ATTENDANCE AND PUNCTUALITY—

1. The average daily attendance must be at least 75% of the enrollment.

2. There must not be more than 5% of tardiness for any month, during the school year, previous to accrediting.

3. No teacher shall have more than 40 pupils.

THE COMMUNITY—

1. A parent-teacher or similar organization in connection with the school.

2. At least two public entertainments during the year, in which as many pupils as possible participate.

3. The school to be visited by each trustee or the local supervisor at least twice during the school year.

MISCELLANEOUS—

1. Evidence of a wholesome pupil-teacher relationship existing in the school.

2. At least one extra-curricula activity, as for example, Boys and Girls Clubs, Literary Societies, etc.

3. No school in which high school subjects are being taught, can be considered a standard elementary school unless the requirements for a standard high school are being fully met.

4. Fire drills at frequent intervals as provided by the laws of Florida.

GROUP IV

(Schools of one or two teachers)

REQUIRED ITEMS

LOCATION—

1. Accessible to all the children to be served by the school.

2. As far removed as possible from all distracting noises or other disturbing influences.

GROUNDS—

1. Free from all trash and rubbish.

2. Neat waste paper receptacles.

3. Flagstaff, with flag displayed.

4. Ample playground, and at least three pieces of playground equipment.

5. Grounds well cared for.

6. If fences are provided they must be neat, attractive, and in good repair.

BUILDINGS AND ROOMS—

1. Adequate building with a modern classroom for each teacher.

2. Building well constructed, painted and in good repair.

3. Adequate means for locking doors and windows.

4. Each room must have at least fifteen square feet of floor space for each pupil enrolled; must have window space equal to at least one-fifth of the total floor space, and light must fall over the left shoulders of the pupils. (Light from both the left side and the rear of the room is permissible, but from the left side only is the better arrangement.)

5. The ceiling of the room must not be less than eleven feet, or more than thirteen feet above the floor. The windows should extend well up toward the ceiling, and each window sill should be at least three feet above the floor.) All sashes adjustable by means of some approved method.

12. Fire escapes, where necessary, as provided for by the laws of Florida.

EQUIPMENT—

1. Each classroom must be supplied with a sufficient number of patent desks of the right size to accommodate the children enrolled, and the desks must be properly placed.

2. A teacher's chair, desk, and wastebasket.

3. A bookcase for supplementary readers, reference books, etc., for each classroom.

4. A library of at least 30 books per teacher for the exclusive use of the elementary grades is required for the school year 1926-27, 40 books per teacher for 1927-28, and 50 books per teacher for 1928-29.

5. Pupils in grades 1 and 2 must read during the school year at least four books—basal and supplementary. For each of the other grades there must be at least three sets of supplementary readers (one-half as many copies to the set as there are children enrolled in the grade at the beginning of the second month of school.)

6. A globe at least 12 inches in diameter and a set of three wall maps, including a map of Florida. (A globe to be suspended from the ceiling is preferable.)

7. At least two appropriate wall pictures for each room.

8. A dictionary to be owned by every child in grades 4-8.

9. The water supply must be adequate, pure and supplied by means of bubbling fountains, or by covered cooler with spigot and sanitary individual drinking cups.

10. Facilities for washing hands and faces.

11. A fully equipped first-aid outfit constantly kept for emergencies.

12. Pupils weighed at regular intervals.

13. The school shall have at least one phonograph, piano, or organ.

14. Adequate heating facilities.

15. A bulletin board.

16. Special equipment for primary work to the value of \$5.00 per room.

TEACHERS—

1. One or two full-time teachers.

2. No teacher shall hold a certificate lower than the Second Grade, and it is to be understood that requirements with reference to qualifications of teachers will be raised as rapidly as possible.

3. Each teacher must demonstrate good technique of teaching, and give evidence of professional preparation and growth.

4. Each teacher is to subscribe for and read at least one professional magazine, read regularly a daily newspaper, and read at least two professional books during the year.

5. Teachers are to prepare and carry out programs for all special days as suggested in the Elementary Course of Study and the Florida School Laws.

6. A daily schedule shall be posted in a conspicuous place in each classroom.

7. Lesson plans must be made and kept by every teacher.

8. The objectives for individual subjects as outlined in the State Elementary Course of Study must be attained.

9. Teachers are to supervise playground activities of pupils at recesses and before and after school.

10. There must not be more than eighteen classes in one room school, and not more than fourteen classes per teacher in a two room school. (See Daily Schedule—State Department of Education.)

INSTRUCTION—

1. The term of school shall be at least eight months, or 760 days. A minimum term of nine months or 180 days is urgently recommended.

2. There must be evidence that instruction is being vitalized by each and every teacher in accordance with the State Elementary Course of Study.

3. There are to be periods of supervised study every day.

4. A diagnostic standard test is to be given in at least one subject during the school year, and evidence shown that remedial work is provided for those pupils found to be below standard. Also provision is to be made to ensure the progress of those pupils found to be above standard.

5. Pupils must be classified according to their ability to do school work.

6. Evidence is to be given that the right amount of time is being devoted to each subject in the curriculum.

7. Every elementary teacher must give training in health work and in citizenship.

8. There must be a physical examination of elementary children at least once each year, and evidence that the necessary follow-up work has been done.

9. Use of a daily newspaper in the school.

10. Evidence of clean and systematic house-keeping—pupils participating—must be shown.

11. Pupils take part in devotional and other exercises.

12. Instruction must be confined to grades 1-8.

RECORD AND REPORTS—

1. A well-planned system of individual records throughout the grades, beginning with the first.

2. Reports made at regular intervals to parents, attendance officer, and other school officials.

ENROLLMENT, ATTENDANCE AND PUNCTUALITY—

1. The average daily attendance must be at least 75% of the enrollment.

2. There must not be more than 5% of tardiness during the school year, for any month, previous to accrediting.

3. No teacher shall have more than 40 pupils.

THE COMMUNITY—

1. A parent-teacher or similar organization in connection with the school.
2. At least two public entertainments during the year, in which as many pupils as possible participate.
3. The school to be visited by each trustee or the local supervisor at least twice during the school year.

MISCELLANEOUS—

1. Evidence of a wholesome pupil-teacher relationship existing in the school.
2. At least two extra-curricula activities, as for example, Boys and Girls Clubs, Junior Red Cross, Literary Societies, etc.
3. No school in which high school subjects are being taught can be considered a standard elementary school unless the requirements for a standard high school are being fully met.
4. Fire drills at frequent intervals, as provided for by the laws of Florida.

Flexible Points	Score
Symmetrical walks	1
Artificial lights	2
Socialized recitation	2
Teacher to live in the community in which he or she teaches	2
Teachers' house	2
Participation in a county fair, county track meet, or similar contest	2
Ample space for playground and garden uses.....	2
Individual or group self-scoring charts or graphs kept by pupils, as for example in spelling, punctuality, reading, arithmetic, etc.	3
Every teacher a member of the Florida Education Association	3
Attractive setting	3
Trees, flowers, shrubbery, and a well-kept lawn.....	3
A school periodical	3
A school garden	3
One free-activity period each day in the primary grades	3
Reading Circle work for pupils	4

Special individual or group project work	4
Lunches well cared for	4
Adequate equipment for principal's office.....	4
Extra room for various school activities as cooking, sewing, shop-work, etc.	4
Provision for sale of hot lunches, fruit and milk at the lowest possible prices	5
Each teacher to visit the homes of all his or her pupils at least once a year	6
The school, a community center.....	6
Principal to hold a faculty meeting for professional study at least twice per school month.....	6
Principal to spend at least 60% of his or her time, not given to classroom instruction, in supervision of classroom instruction	8
Special points of merit other than here mentioned....	15
Total points	100

METHOD OF SCORING

STANDARD SCHOOL:

Any elementary school in order to become a Superior School, must meet all the required points in its respective group, and in addition must attain a score of at least 75% 25% of the "Flexible Points" indicated above.

SUPERIOR SCHOOL:

Any elementary school in order to become a Superior School, must meet all the required points in its respective group, and in addition must attain a score of at least 75% of the "Flexible Points" indicated above.

HOW SCHOOLS MAY BECOME STANDARD OR SUPERIOR

When any school officer, superintendent, supervisor or principal feels that a given school meets all the requirements for standardization, application may be made to the State Department of Education for checking the same. Upon receipt of application, the State Department will make necessary investigation and standardize the school if it meets all the requirements.

RECOGNITION OF STANDARD OR SUPERIOR SCHOOLS

1. The names of all Standard and all Superior Schools will be published by the State Department.
2. A certificate will be issued by the State Department indicating Standard or Superior Schools.
3. Pupils completing the work of the eighth grade of a Standard or Superior Elementary School, will be admitted to a Standard High School without examination.

Approved by the State Board of Education February 1, 1926.

TESTS IN READING AND OTHER SUBJECTS

As stated elsewhere in this report it was thought best this year to attempt the attainment of a limited number of objectives for the elementary schools and the rural school inspector agreed early in the year to place the major emphasis upon the teaching of reading. Other school subjects and other aims were not neglected, as will be observed from the scope of the Gadsden County Survey, but a definite attempt was made to find how well pupils can read by giving standard tests in reading. Results of testing were analyzed and teachers were led to adopt methods of instruction that would cause a definite increase in the ability of pupils to interpret the thought expressed by the printed page.

Reading tests upon a county-wide basis were given in six counties, and in thirty or more counties tests in reading or spelling or both were given and results analyzed. Batteries of tests in common school subjects were given in thirty or more schools, and in a number of cases individual graph cards for pupils were made showing results attained.

An illustration of discoveries made as a result of giving silent reading tests is shown in the following graphical table:

GRADE ABILITY IN READING AS SHOWN BY THORNDYKE-

McCALL READING SCALE, FORM 1.

(20 Pupils of an Eighth Grade Class)

C. B.		5.6							
I. M.		5.3							
W. R.		5.2							
R. M.	4.8								

* The number before the point indicates the grade; that following it the month of the grade.

By reference to this table we observe that pupil L. A. has a grade ability, as revealed by the reading test, of a pupil in the eighth month of the twelfth grade. On the other hand pupil R. M. has a grade ability no higher than a pupil in the eighth month of the fourth grade. All of the remaining pupils have grade abilities lying somewhere between these two, there being one pupil with eleventh grade ability, two with that of ninth, one with seventh, five with sixth, and nine that have ability of fifth grade pupils. The black vertical line shows the standard normal for eighth grade, and the broken vertical line indicates the actual class norm for these twenty pupils. It will be observed that:

1. There is a range of eight years in grade ability in this class.
2. Two pupils, L. A. and C. C. read like pupils in the upper high school grades.
3. Pupils L. P. and L. F. read with ninth grade ability.
4. The class average is more than two years below standard.

5. Sixteen of the twenty pupils are below standard, and one-half of the entire class is two years or more below standard.

In a similar manner to the above the grade ability of pupils in other common school subjects was shown in a number of schools.

SUMMARY OF ACTIVITIES

The following is a brief summary of my activities for the year ending June 30, 1926:

1. Assisted the chief clerk of the State Department of Public Instruction in codifying the school laws of Florida.

2. Directed an educational survey of Gadsden County, and published a bulletin of results and recommendations.

3. Directed the publication of the bulletin entitled Consolidation, Finance, and Illustrated Exhibit of the Schools of Marion County.

4. Directed, with the assistance of the Rural School Inspector, the preparation and publication of the Standards for Florida Elementary Schools.

5. Visited in a systematic manner one hundred and three schools in seventeen counties, and made shorter visits to nine other counties.

6. Made twenty addresses before county, district, and state educational meetings.

7. Made seven addresses to citizens in the interest of consolidation of schools.

8. Made eight short addresses before luncheon clubs.

9. Made one address before a County Federation of Women's Clubs.

10. Held twenty-one conferences with principals, trustees, county superintendents, and county boards.

11. Attended four meetings of the executive committee of the Florida Education Association.

12. Attended the conferences of County Superintendents and High School Principals at Gainesville in April.

13. Attended the State Meeting of the Florida Education Association, and the meeting of the Department of Superintendence of the National Education Association.

Respectfully submitted,

R. M. EVANS,

State Supervisor of Elementary Schools.

ELEMENTARY SCHOOLS—STATE-ACCREDITED (Old Plan)

FOR THE YEAR 1924-'25

Minimum Requirements: At least eighty per cent of all items on Application Blank under each of the following heads: Building, Grounds, Equipment, Teacher or Teachers, School Organization, and School-Community Activities. Of Schools previously accredited, ninety per cent is required.

County	Name of School	Principal	Postoffice of Principal	Monthly Salary of Principal	Enrollment	Number of Other Teachers
Alachua ...	Arredondo	Mrs. C. R. Curry	Arredondo	\$ 95	16	0
	Bland	Miss Virginia Nicholson		60	35	0
	Cherry Sink	Mrs. R. F. Proctor		75	35	0
	Island Grove	L. M. Campbell		85	54	1

Madison	Hanson	W. Clarence Durham	Madison	80	63	1
	Hickory Grove	Mrs. R. L. Cunningham	Madison, Route B.	90	40	1
	Lee	Candler Matheny	Lee	125	124	3
	Oak Hill	Mrs. Carl Smith	Pinetta	90	41	1
	Macedonia	Mrs. A. E. Ragans	Lee	100	54	1
Osceola	Sirmans	Clarence Hill	Ebb	135	65	2
	Campbell	M. E. Taylor	Campbell	100	74	2
	Hancock	Miss Pauline Smith	Loughman	85	28	0
	Holopaw	Annie C. Newton	Holopaw	150	120	3
Polk	Pierce	Horace O'Bryant	Pierce	230	105	3

STANDARD ELEMENTARY SCHOOLS (New Plan)

(For requirements for standardization, see Standards for Florida Elementary Schools, published by the State Department of Public Instruction)

County	Name of School	Principal	Postoffice of Principal	Monthly Salary of Principal	Enrollment	Number of Other Teachers
Alachua ...	Rochelle	Miss Rosa Pardee	Rochelle	85	21	0

Note.—The Standards for Elementary Schools were adopted by the State Board of Education, Feb. 1, 1926, and inasmuch as many schools had by this time completed the year's work, few applications for standardization for the year 1925-1926 have been made.

CHAPTER IV

BIENNIAL REPORT

of the

STATE SUPERVISOR OF HIGH SCHOOLS

July 1, 1924—June 30, 1926

LETTER OF TRANSMITTAL

State of Florida
Department of Public Instruction
Tallahassee, Florida.

October 1, 1926

Honorable W. S. Cawthon,
State Superintendent of Public Instruction,
Tallahassee, Florida.

Sir:

I have the honor to submit herewith a report of Florida high schools for the biennium beginning July 1, 1924, and ending June 30, 1926.

Respectfully yours,
R. M. SEALEY,
State Supervisor of High Schools.

GROWTH OF FLORIDA HIGH SCHOOLS

The figures shown in Table 1 afford convincing evidence that the growth of Florida high schools for many years past has been both steady and rapid. A period of ten years (1915-16 to 1925-26) shows an increase of practically 400 per cent in the number of pupils in the twelfth grade, as shown by the annual reports of the county superintendents of public instruction. Since the increase in enrollment in grades nine to twelve, inclusive, during a period of nine years (1916-17 to 1925-26), as revealed by figures from the same source, is barely 200 per cent the conclusion would seem warranted that not only are the schools growing in numbers but that the holding power of the schools is rapidly increasing. Evidently the youth of Florida are becoming more and more convinced that the completion of a high school education is desirable.

The figures shown in columns 4 and 5, and 5 and 6, respectively, are paralleled in order to call attention to the discrepancy between the numbers reported directly by the schools in their standardization reports and the numbers reported to the state superintendent of public instruction by the various county superintendents in their annual reports as required by law. Several possible explanations may be offered. First, it may be contended that reports requesting standardization are purely voluntary and that the figures revealed thereby are, therefore, incomplete, while those shown by the county superintendents' reports are necessarily complete, since these are required by law. Second, the standardization reports are submitted early in the school year, necessarily leaving out of account large numbers of pupils who enter later, while the county superintendents' reports are made upon the basis of the aggregate enrollment for the school year. Third, there is a considerable number of pupils in non-standard high schools which do a fairly creditable type of work. Fourth, there are many pupils classified as ninth, tenth, eleventh, or twelfth-grade pupils in schools that cannot hope to be listed as standard and which make no effort in that direction. Many of these are schools of only one or two teachers with pupils enrolled in all of the elementary grades.

The first reason cited above may be considered negligible in its effect during this biennium, since it is a fact that virtually every high school at all worthy of the name has

sought to be listed as standard and has therefore reported. The second reason gives explanation for a material difference in the figures, but there is no reason to believe the increase in enrollment after the first month to be so great as these figures would indicate. In connection with the third reason offered it should be stated that there were in 1924-25, 3,029 pupils in non-standard high schools reporting to this office. In 1925-26 there were 1,008 pupils in all non-standard high schools reporting. This number is decreasing annually with the more successful efforts of the schools to meet standardization requirements. The fourth reason is held by the writer as the largest factor in explanation of the discrepancy between the high school enrollment as shown by the standardization reports and the same enrollment as shown by the reports of the county superintendents. This means that there are many boys and girls in Florida who think they are doing high school work when they are not doing anything of the kind. A probably more serious phase of the situation lies in the fact that almost invariably these so-called high school pupils are demanding a share of some teacher's time all of which rightfully belongs to the elementary pupils within that school. County authorities should not permit the double wrong of robbing the elementary pupil of his right to the teacher's time and of permitting the would-be high school pupil to believe he is acquiring a high school education when he is clearly not doing so.

By means of the figures shown above, reason three can be eliminated for the past two years. Reason one is known to have had negligible application during the past biennium. In 1924-25, there were 5,051 pupils who either entered high school after the close of the first month or were not in a standard high school at all; in 1925-26 there were 2,634 such pupils, a gratifying decrease, when reason four is considered. If the liberal allowance of half the numbers given be made for pupils entering late, it is still alarming to note the number of Florida boys and girls who are receiving a spurious article in the educational market. When county authorities permit high school work to be attempted in a school with fewer than five teachers and with pupils in all of the elementary grades to be taught they are being guided by a policy which is not only shortsighted but positively unjust to the children to be educated.

* Four-year high schools only.

STANDARDS FOR FLORIDA HIGH SCHOOLS

The standardization requirements for Florida high schools in effect from 1924 to 1926 are not given here by reason of the fact that they were the same during the biennium just closed as are shown under the heading "Regulations for Florida High Schools" in the biennial report submitted on October 1, 1924. These were included in the Biennial Report for 1922-24. It has been necessary to work out a new classification for the high schools of the state in the light of the statute enacted at the last session of the Florida Legislature which permits individual schools or county systems to organize on the basis of either a six-year or an eight-year elementary school, thus allowing the secondary school period to begin either with the seventh grade or the ninth grade. In the light of these new legal possibilities a new classification for Florida high schools was prepared, together with appropriate regulations governing standardization, and these were adopted by the State Board of Education on September 6, 1926. It should be borne in mind

that the standards included herein are not those under which the schools were listed during the biennium just closed. Those included herewith are those in operation at the present date, October 1, 1926.

CLASSIFICATION OF FLORIDA HIGH SCHOOLS

(Adopted by the State Board of Education, September 6, 1926)

Florida high schools are classified in three groups, namely: Senior High Schools, Junior-Senior High Schools, and Junior High Schools. On the basis of their organization, only five types of high schools are recognized, as follows:

SENIOR HIGH SCHOOLS

1. Four-Year Senior High School—grades 9-12
This type of high school is based on an eight-year elementary school.
2. Three-Year Senior High School—grades 10-12
This school is based on a Three-Year Junior High School (grades 7-9), which, in turn, is built on a six-year elementary school.

JUNIOR-SENIOR HIGH SCHOOLS

3. Six-Year Junior-Senior High School—grades 7-12
This school is based on a six-year elementary school. In a Junior-Senior High School grades 7, 8, and 9 must be administered as a Junior High School unit, and grades 10, 11, and 12 as a Senior High School unit. This does not preclude a joint organization and administration of these two units, with a principal and teachers common to the two, but a departmental organization on the 6-2-4 plan will not be considered a Junior-Senior High School.

JUNIOR HIGH SCHOOLS

4. Three-Year Junior High School—grades 7-9
This school is based on a six-year elementary school.
5. Four-Year Junior High School—grades 7-10
This school is based on a six-year elementary school.

Each of the two types of Junior High Schools is further divided into two classes—"A" and "B." Those Junior High Schools maintained in communities where there is no Senior High School located will be designated as Three-Year B-Junior High Schools or as Four-Year B-Junior High Schools, as the case may be. Those Junior High Schools maintained in communities where there are one or more Senior High Schools will be classified as Three-Year A-Junior High Schools or as Four-Year A-Junior High Schools. The last-named, however, will usually be only a temporary classification. Requirements for standardization are different for the "A" and the "B" classes of Junior High Schools.

It will be observed that there are only two types of elementary schools possible in Florida. Namely, the six-year school and the eight-year school. Each of the above-named types of secondary schools must be based upon one or the other of these two kinds of elementary schools. The type of the elementary school necessarily determines the type of the secondary school.

STANDARDS FOR FLORIDA HIGH SCHOOLS

These Standards are based upon Chapter 10921, Acts of 1925, Approved by the State Board of Education
September 6, 1926

STANDARDS APPLYING TO HIGH SCHOOLS OF ALL TYPES

QUALITY OF INSTRUCTION—

The State Department of Public Instruction looks upon good teaching as the most important single point of excellence that a school can possess. All high school supervision, therefore, will look upon the character of class-room activity as of supreme importance. The fitness of any teacher will be expected to reveal itself in effective teaching.

TEACHERS' CERTIFICATES—

Each teacher must hold a valid Florida certificate covering every subject he or she teaches.

THE SPIRIT OF THE SCHOOL—

The spirit and tone of the school as manifested in the pupil-teacher relationship, the attitude of the pupils toward their teachers, toward their work, and toward the life of the school in general is a matter that is considered of great importance in the supervision and standardization of high schools. An obvious lack along any one of these lines may result in withholding a school from the list.

LENGTH OF SCHOOL TERM—

The school term shall not be less than thirty-two weeks, or 160 days. A term of thirty-six weeks, or 180 days, is recommended for both elementary and high schools. The elementary school should continue in session as long as the high school with which it is connected.

PROGRAM OF STUDIES—

The program of studies of all high schools must be approved by the State Department of Public Instruction. After the program has been once approved, notification should be given promptly when any change is made. All Senior High Schools are required to follow the program of studies for that group as shown elsewhere in this publication. Junior High Schools must receive approval for their program before beginning work under this form of organization. (See Standards for Junior High Schools.)

LENGTH OF CLASS PERIODS—

The length of each recitation period in all high school classes shall be not less than 45 minutes. Schools are hereby given authority to use a longer period, however, if such is desired.

THE SCHOOL PLANT—

“The location and construction of the buildings, the lighting, heating and ventilation of the rooms, the condition of the corridors, lavatories and closets, water supply, school furniture, apparatus, and the methods of cleaning must be such as to insure hygienic conditions for both

pupils and teachers." (Southern Association Regulations.) Any condition that clearly endangers the health of pupils or teachers will be considered sufficient reason for refusing to list a school.

SCHOOL RECORDS—

Complete and accurate records of attendance, punctuality, class standing, and other vital educational facts concerning each pupil must be kept. These should be in such form as to be conveniently referred to and safely preserved. A safe or a vault in the school building is recommended for the safekeeping of these records. It is advisable to keep all records in duplicate so that one set may be preserved in the office of the County Superintendent while one is kept for use in the high school office. A single set of report cards, which are sent at intervals to the pupils' homes, with no copies held in the school, is not considered an adequate system of records. A book—either loose-leaf or bound—or a card system that shows a cumulative record of the pupils should be made use of in every school.

ADMISSION OF PUPILS FROM OTHER HIGH SCHOOLS—

No standard high school shall accept work done in a non-standard or non-accredited secondary school. Pupils from such schools before being admitted to any standard high school must pass satisfactory written examinations in the subjects in which they apply for high school credit. The examination must be conducted by the principal, and pupils' papers must be filed in the principal's office, together with the questions on which the examinations were based.

ELEMENTARY SCHOOLS NOT TO BE NEGLECTED—

No high school will be listed as a standard school so long as it appears that this department is being maintained at the expense of the elementary school with which it is connected. A sufficient number of qualified teachers should be provided; adequate libraries, sufficient maps, and other necessary teaching materials should be supplied; and an adequate number of supplementary readers should be at hand. (See latest edition of "Standards for Elementary Schools.")

ARTICULATION AMONG THE VARIOUS TYPES OF SCHOOLS—

It is essential that credits should be readily transferable from one standard high school to another. Therefore, courses should in general be planned so as to articulate with the advanced courses toward which the pupil may be working. The transfer of pupils' records should be directly from one school to another and not through the pupils' hands. Under such circumstances the work of one standard high school should be received by another at face value unless the work should prove not to have been valid.

SUMMER SCHOOL WORK AND WORK DONE UNDER
PRIVATE INSTRUCTION—

Subjects not previously studied in a standard secondary school under standard conditions must not be accepted for credit in any standard high school. The time requirement as given in the definition of a high school unit (see page 13) should be rigidly adhered to in all cases. If a school operates a summer session it should be recognized by the school authorities and should be organized and operated on the same basis as is the regular school term for those pupils who are attempting to earn credit in subjects that have not been previously studied. Work done under private instruction should not be accepted for credit under any circumstances.

OTHER STANDARDS—

In addition to these standards applying alike to schools of all types, both Junior and Senior, each school will be required to comply with all standards applying to schools of its particular type.

REPORTS TO THE DEPARTMENT OF PUBLIC INSTRUCTION—

Accurate and complete information is essential in the standardization of high schools. All schools desiring to be listed as standard must submit, with reasonable promptness, all reports requested by the State Department of Public Instruction. Such reports must be complete and must contain all of the information asked for. Withholding information that is vital in the standardization of a

high school will be considered a sufficient reason for refusing to consider such a school.

CHANGES IN PRINCIPALSHIP AND FACULTY—

Any change of principalship or in the teaching force, whether by the addition of new teachers during the year, or by the replacement of those whose positions may be made vacant by resignation, must be reported promptly to the State Department of Public Instruction.

SENIOR HIGH SCHOOLS

FOUR-YEAR SENIOR HIGH SCHOOL—GRADES 9-12

In addition to meeting all of the *Standards Applying to All Classes of High Schools*, any school in order to be listed as a Standard Four-Year Senior High School must meet each of the following requirements:

ENROLLMENT AND ATTENDANCE—

1. When the high school is connected with an elementary school the combined enrollment shall be not less than 150.
2. There must be in regular attendance not less than a total of 40 pupils in the four high school grades, not less than 15 of these being in the 11th and 12th grades, all regularly advanced from the grade next below.

TEACHERS—

1. There must be employed in the high school department at least two full-time teachers in addition to the principal.
2. Teachers must be assigned to those subjects which they are best prepared to teach. This is usually indicated by the teacher's specialization in college and by certification.

THE PRINCIPAL—

1. The principal shall hold one of the Florida State or Life State Certificates.

2. His teaching time shall not occupy more than four class periods per day.

3. The major portion of his non-teaching time shall be devoted to class-room supervision.

PUPIL-LOAD—

1. No pupil shall be permitted in the first year of high school to carry more than four subjects each of which has the value of a full unit of credit. A pupil in the second, third, or fourth year whom the principal considers exceptionally strong, both mentally and physically, may, for good reason, be permitted to carry five such subjects. The number of such pupils should not exceed 15 per cent of the total high school enrollment.

2. Whenever a pupil carrying five subjects fails in one or more of them he shall not again, during his high school course, be permitted to carry more than four such subjects.

TEACHER-LOAD—

The number of pupils per recitation section may average 30. The maximum teacher-load should be considered 150 pupil-hours per day, or 750 per week. The number of daily periods of class instruction given by any teacher should not exceed five. Schools in which these numbers are exceeded will be considered with extreme care before being listed as standard.

THE BUILDING—

When the high school is connected with an elementary school the building must contain at least eight adequate and properly equipped school rooms, and at least two of these must be devoted to the exclusive use of the high school.

THE LIBRARY—

1. A high school with an enrollment of 40 to 60 pupils must have a library of at least 300 volumes suitable for high school library use; a school of 60 to 80 pupils must have a library of at least 400 such volumes; a school of 80 to 100 pupils must have a library of at least 500; and larger

schools should have larger libraries in somewhat similar ratio. (Library list will be furnished on request.)

2. There should be an annual per capita appropriation based on the enrollment in the high school, which should go to the purchase of new books, replacement of lost or worn ones, and subscriptions to magazines and newspapers.

THE LABORATORY—

Suitable laboratory equipment of the sciences taught must be provided and adequate provision made for its proper care. (See bulletin entitled "The Teaching of High School Science" and laboratory list furnished on request.) Sufficient equipment must be provided for at least two of the high school sciences.

OTHER EQUIPMENT—

Visual aids of various kinds, such as maps, charts, pictures, lantern slides, and specimens, are now looked upon as essential to good teaching in any branch of knowledge. These should be provided to meet the needs of the school.

SCIENCE LABORATORY PERIODS—

Each high school science shall have devoted to it weekly a minimum of 180 minutes of laboratory work. In the case of a 60-minute class schedule three periods per week should be devoted to laboratory and two to class-room activity; with a 45-minute class schedule, two 90-minute periods per week should be given to laboratory work and three 45-minute periods to class work.

REQUIREMENTS FOR GRADUATION—

Sixteen units shall be required for graduation, each of which shall comply with the definition stated below. The required units as shown in the Program of Studies for Four-Year High Schools shall be included.

DEFINITION OF A UNIT—

A unit represents a year's study in any subject in a secondary school, so planned as to constitute approximately one-fourth of a full year of work for a pupil of normal

ability. To count as a unit, the recitation periods shall aggregate approximately 120 sixty-minute hours. Time occupied by shop or laboratory work counts one-half as much as time in recitation. Fractional parts of a unit of work may be organized either by continuing a course through a portion of a year or by having recitations less frequently than five times a week, provided that not less than half a unit in any subject shall be counted as credit toward graduation.

THREE-YEAR SENIOR HIGH SCHOOL—GRADES 10-12

In addition to meeting all of the *Standards Applying to All Classes of High Schools*, any school in order to be listed as a standard Three-Year Senior High School must satisfy each of the following requirements:

ORGANIZATION—

1. Those schools desiring to reorganize so that grades 7, 8, and 9, inclusive, shall be designated as the junior high school, and grades 10, 11, and 12, inclusive, as the senior high school, shall submit to the State Department of Public Instruction for approval a statement setting forth the reasons for desiring such a form of organization: the plan of the proposed organization; and the proposed program of studies for grades 7, 8, and 9, and for grades 10, 11, and 12. Such action shall have the official approval of the County Board of Public Instruction in the case of each school so organizing.

2. When an entire county desires to reorganize its schools on this basis, steps similar to those outlined above shall be taken by the County Superintendent and the County Board of Public Instruction.

3. No school shall be entitled to recognition as a Three-Year Senior High School until it has secured the approval of the State Department of Public Instruction as set forth above.

4. No high school made up of grades 10, 11 and 12, only, will be recognized as a standard high school by the State Department of Public Instruction until after all information and reports requested shall have been furnished concerning both the junior high school grades (7, 8, and 9) and the senior high school grades (10, 11, and 12), when the two types of schools are located in the same community.

ENROLLMENT—

This type of high school is not advised until the enrollment in either the Junior or Senior High School approaches or exceeds 500. A joint Junior-Senior High School is advised until the combined enrollment in grades 7 to 12 approaches 1,000.

PRINCIPAL'S CERTIFICATE—

The principal shall hold one of the Florida State or Life State Certificates.

PUPIL-LOAD—

Four subjects, each of which has the value of a full unit, shall be considered the typical pupil-load. A pupil who proves to be exceptionally strong, both mentally and physically, may, for good reason, be permitted to carry five such subjects. The number of pupils receiving this permission should not exceed 15 per cent of the total high school enrollment.

TEACHER-LOAD—

The number of pupils per recitation section may average 30. The maximum teacher-load should be considered 150 pupil-hours per day, or 750 per week. The number of daily periods of class instruction given by any teacher should not exceed five. Schools in which these numbers are exceeded will be considered with extreme care before being listed as standard.

THE LIBRARY—

The library must be adequate to meet the needs of this type of high school. The books should be card cataloged and a person who has had training in library science should be in charge. An annual per capita appropriation based on the number of pupils enrolled should be provided for proper maintenance.

THE LABORATORY—

Suitable laboratory equipment for the sciences taught must be provided and adequate provision made for its proper use and care.

OTHER EQUIPMENT—

Visual aids of various kinds, such as maps, charts, pictures, lantern slides, and specimens, are now looked upon as essential to good teaching in any branch of knowledge. These should be provided to meet the needs of the school.

SCIENCE LABORATORY PERIODS—

Each high school science shall have devoted to it weekly a minimum of 180 minutes of laboratory work. In the case of a 60-minute schedule of classes three periods per week should be devoted to laboratory and two to class-room activity; with a 45-minute class schedule, two 90-minute periods per week should be given to laboratory work and three to class work.

REQUIREMENTS FOR GRADUATION—

Twelve units shall be required for graduation from this type of high school, all of which must have been earned in grades 10, 11, and 12. Four units is the maximum that may be accepted for entrance into this type of school from the ninth grade of a high school of any other type. The twelve units required for graduation, together with the four presented for entrance, must include all of those units that are required for graduation from a Senior High School, as explained below.

DEFINITION OF A UNIT—

A unit represents a year's study in any subject in a secondary school, so planned as to constitute approximately one-fourth of a full year of work for a pupil of normal ability. To count a unit, the recitation periods shall aggregate approximately 120 sixty-minute hours. Time occupied by shop or laboratory work counts one-half as much as time in recitation. Fractional parts of a unit of work may be organized either by continuing a course through a portion of a year or by having recitations less frequently than five times a week, provided that not less than half a unit in any subject should be accepted as credit toward graduation.

JUNIOR-SENIOR HIGH SCHOOLS

In addition to meeting all of the *Standards Applying to All Classes of High Schools*, any school in order to be listed as a Standard Junior-Senior High School must meet each of the following requirements:

REORGANIZATION—

1. Those schools desiring to reorganize so that grades 7, 8 and 9, inclusive, shall be designated as the Junior High School, and grades 10, 11, and 12, inclusive, as the Senior High School, shall submit to the State Department of Public Instruction for approval a statement setting forth the reasons for desiring such a form of organization; the plan of the proposed organization; and the proposed program of studies for grades 7, 8, and 9, and for grades 10, 11, and 12. Such action shall have the official approval of the County Board of Public Instruction in the case of each school so organizing.

2. When an entire county desires to reorganize its schools on this basis, steps similar to those outlined above shall be taken by the County Superintendent and the County Board of Public Instruction.

3. No school shall be entitled to recognition as a Junior-Senior High School until after it has secured the approval of the State Department of Public Instruction as set forth above.

4. No high school made up of grades 7-12 will be recognized as a standard high school by the State Department of Public Instruction until after all information and reports requested shall have been furnished concerning both the Junior High School grades (7, 8, and 9), and the Senior High School grades (10, 11, and 12).

ENROLLMENT—

When a 6-3-3 form or organization is desired this type of school is advised so long as the combined enrollment of grades 7 to 12 remains substantially less than 1,000. There must be an enrollment of at least 40 in grades 9 to 12, inclusive, with at least six of these in grade 12, before this type of organization is employed.

ORGANIZATION AND ADMINISTRATION—

This type of school may take either the form of a modified 6-3-3 organization or that of a straight 6-6 type. The choice here would depend largely upon the enrollment in grades 7 to 12. In those schools more nearly approaching the maximum enrollment for this type the entire high school, junior and senior, might be housed in the same building, but administered as two distinct units, using certain portions of the building in common. In the smaller schools the entire junior-senior group should be administered as a single unit, preserving necessary distinctions by such designations as "Junior Group" and "Senior Group."

TEACHERS—

1. There must be employed in the high school department (grades 7-12) at least three full-time teachers in addition to the principal.

2. Teachers must be assigned to those subjects which they are best prepared to teach. This is usually indicated by the teacher's specialization in college and by certification.

THE PRINCIPAL—

1. The principal shall hold one of the Florida State or Life State Certificates.

2. His teaching time shall not occupy more than 15 class periods per week.

3. The major portion of his non-teaching time shall be devoted to class-room supervision.

PUPIL-LOAD—

Four subjects, each of which has the value of a full unit, shall be considered the typical pupil-load for the senior high school division. A pupil who proves to be exceptionally strong, both mentally and physically, may, for good reason, be permitted to carry five such subjects. The number of such pupils should not exceed 15 per cent of the enrollment in the senior high school group.

TEACHER-LOAD—

The number of pupils per recitation section may average 30 to 35. Schools in which the maximum teaching load greatly exceeds 750 pupil-hours per week will be considered with unusual care before being listed as standard. The number of weekly periods of class instruction given by any teacher should not exceed 26 or 27.

THE LIBRARY—

1. A high school with an enrollment of 40 to 60 pupils must have a library of at least 300 volumes suitable for high school library use; a school of 60 to 80 pupils must have a library of at least 400 such volumes; a school of 80 to 100 pupils must have a library of at least 500; and larger schools should have larger libraries in somewhat similar ratio. (Library list will be furnished on request.) The books shall be especially chosen for this type of school, taking into consideration the needs of the junior high school.

2. There should be an annual per capita appropriation based on the enrollment of the high school which should go to the purchase of new books, replacement of lost or worn ones, and subscriptions to magazines and newspapers.

THE LABORATORY—

Suitable laboratory equipment for the sciences taught must be provided and adequate provision made for its proper care. (See bulletin entitled "The Teaching of High School Science" and laboratory list furnished on request.) Sufficient equipment must be provided for at least two of the high school sciences.

OTHER EQUIPMENT—

Visual aids of various kinds, such as maps, charts, pictures, lantern slides, and specimens, are now looked upon as essential to good teaching in any branch of knowledge. These should be provided to meet the needs of the school.

SCIENCE LABORATORY PERIODS—

Each high school science shall have devoted to it weekly a minimum of 180 minutes of laboratory work. In the

case of a 60-minute schedule of classes three periods per week should be devoted to laboratory and two to class-room activity; with a 45-minute class schedule two 90-minute periods per week should be given to laboratory work and three to class work.

REQUIREMENTS FOR GRADUATION—

Twelve units shall be required for graduation from the senior high school, each of them complying with the definition of a unit as stated below. All of the twelve must have been earned in grades 10, 11, and 12. None of the work done in the junior high school division may be counted as satisfying any part of the requirements for graduation from the senior high school division. The twelve units required for graduation from the senior high school, together with the junior high school credits presented for entrance, must include all of those units required for graduation from a Senior High School, as explained below.

Definition of a Unit (Applicable to Grades 10, 11, and 12 only)

A unit represents a year's study in and subject in a secondary school, so planned as to constitute approximately one-fourth of a full year of work for a pupil of normal ability. To count as a unit, the recitation periods shall aggregate approximately 120 sixty-minute hours. Time occupied by shop or laboratory work counts one-half as much as time in recitation. Fractional parts of a unit of work may be organized either by continuing a course through a portion of a year or by having recitations less frequently than five times a week, provided that not less than half a unit in any subject shall be accepted as credit toward graduation.

Science Laboratory Periods (Applicable to Grades 10, 11, and 12 only)

Each high school science shall have devoted to it weekly a minimum of 180 minutes of laboratory work. In the case of a 60-minute class schedule three periods per week should be devoted to laboratory and two to class room activity; with a 45-minute class schedule two 90-minute periods per week should be given to laboratory work and three 45-minute periods to class work.

JUNIOR HIGH SCHOOLS

THREE-YEAR A-JUNIOR HIGH SCHOOL—GRADES 7, 8, 9

AND

FOUR-YEAR A-JUNIOR HIGH SCHOOL—GRADES 7, 8, 9, 10

In addition to meeting all of the *Standards Applying to All Classes of High Schools*, any school in order to be listed as a standard Three-Year A-Junior High School or a Standard Four-Year A-Junior High School must meet each of the following requirements:

ORGANIZATION AND ADMINISTRATION—

This classification is designed for the junior high schools located in the larger cities of the State. It contemplates a separate junior high school with distinct organization and administration. No school of this type will be recognized until its plan of organization and administration is approved by the State Department of Public Instruction.

PROGRAM OF STUDIES—

The program of studies must be approved by the State Department before recognition is given. Assistance will be given to those schools desiring to reorganize their programs. A reorganized program of studies is essential to this type of school.

RELATION TO SENIOR HIGH SCHOOL IN SAME COMMUNITY—

When this type of school exists in the same community with a Three-Year Senior High School neither will be listed as standard until after all information and reports requested have been sent to the State Department of Public Instruction by both.

TEACHERS—

1. Teachers must be assigned to those subjects which they are best prepared to teach. This is usually indicated by the teacher's specialization in college and by certification.

2. Teachers with only a Second Grade Certificate should not be employed in this type of school because of the legal limitation of this certificate to grades 1 to 8 and the consequent interference with the departmentalization of instruction.

3. In all cases teachers should be assigned classes in only one subject or in one related group of subjects extending through all of the junior high school grades. The practice of confining all of a teacher's work to the various sections of one grade is thoroughly bad.

THE PRINCIPAL—

1. The Principal shall hold one of the Florida State or Life State Certificates.

2. The major portion of the principal's time shall be devoted to class-room supervision.

THE LIBRARY—

The library must be adequate to meet the needs of this type of school. The books must be cataloged and the library in charge of a person competent to give intelligent library service. A full-time trained librarian is urgently recommended. An annual per capita appropriation based on the number of pupils enrolled should provide for proper maintenance.

THE LABORATORY—

Suitable laboratory equipment for the sciences taught must be provided and adequate provision made for its proper use and care.

OTHER EQUIPMENT—

Visual aids, such as maps, charts, pictures, lantern slides, and specimens, are now looked upon as essential to good teaching in any branch of knowledge. These should be provided to meet the needs of the school. This type of school cannot hope to perform its proper function unless it has the necessary equipment for such branches, for instance, as those which constitute the fine and practical arts subjects.

ARTICULATION WITH THE SENIOR HIGH SCHOOL—

Not more than four high school units of credit for any pupil who has completed the ninth grade, or eight units for a pupil who has completed the tenth grade, can be certified from the junior to the senior high school. This must be uniformly the case regardless of the program of studies or the pupil-load in the junior high school.

THREE-YEAR B-JUNIOR HIGH SCHOOL—GRADES 7, 8, 9

AND

FOUR-YEAR B-JUNIOR HIGH SCHOOL—GRADES 7, 8, 9, 10

In addition to meeting all the *Standards Applying to All Classes of High Schools*, any school in order to be listed as a Standard Three-Year B-Junior High School or a standard Four-Year B-Junior High School must meet each of the following requirements:

ORGANIZATION AND ADMINISTRATION—

This classification is designed for the small junior high schools, located usually in rural sections where there is no senior high school in the immediate community. Such a school will not be recognized where it is directly connected with a senior high school or with an organization which contains a senior high school. No school of this type will be recognized until its plan of organization and administration is approved by the State Department of Public Instruction.

PROGRAM OF STUDIES—

The program of studies must be approved by the State Department of Public Instruction before recognition is given. Assistance will be given to those schools desiring to reorganize their programs.

TEACHERS—

1. Teachers must be assigned to those subjects that they are best prepared to teach. This is usually indicated by the teacher's college specialization and by certification.

2. The employment of teachers with only a Second Grade Certificate should be avoided in this type of school because the limitation of such certificate to the eighth grade or below often prevents the departmentalization of instruction, which is required.

3. If the school includes grades 1 to 9 there must be employed at least four full-time teachers or their equivalent in addition to the principal, with at least one of these devoting full time to teaching in grades 7, 8, and 9; if the school includes grades 1 to 10 there must be employed at least five full-time teachers, or their equivalent, in addition to the principal, with at least two of these devoting full time to teaching in grades 7, 8, 9, and 10.

THE PRINCIPAL—

1. The principal shall hold a valid Florida certificate, which must be one of the State Certificates or a First Grade Certificate, and, in addition thereto, Special Certificates covering the additional branches taught by the principal.

2. The major portion of the principal's non-teaching time shall be devoted to class-room supervision.

ENROLLMENT AND ATTENDANCE—

1. If the school includes grades 1 to 9 there must be in regular attendance at least 30 pupils in grades 7, 8, and 9, with at least six of these in grade 9. If the school includes grades 1 to 10 there must be in regular attendance at least 40 pupils in grades 7, 8, 9, and 10, with at least six of these in grade 10.

2. The average daily attendance of all pupils in the entire school shall be not less than 100.

THE BUILDING—

For the Three-Year B-Junior High School the building must contain at least five suitable recitation rooms, properly equipped, with two of these devoted exclusively to the use of the high school. For a Four-Year B-Junior High School the building must contain at least six suitable recitation rooms, properly equipped, with at least two of these devoted exclusively to the use of the high school. A suitable room must be provided for any special department maintained.

THE LIBRARY—

The school must have a well-selected library which contains not less than 200 volumes worth not less than \$200. (Textbooks and government publications must not be counted.) A list of suggested books will be furnished on request. The library must be properly cared for and must show evidence of proper use.

THE LABORATORY—

Suitable laboratory equipment for the sciences taught must be provided and adequate provision made for its proper care. (See bulletin entitled "The Teaching of High School Sciences" and laboratory list which is furnished on request.)

OTHER EQUIPMENT—

Visual aids of various kinds, such as maps, charts, pictures, lantern slides, and specimens, are now looked upon as essential to good teaching in any branch of knowledge. These should be provided to meet the needs of the school.

ARTICULATION WITH THE SENIOR HIGH SCHOOL—

Not more than four high school units of credit for any pupil who has completed the ninth grade, or eight units for a pupil who has completed the tenth grade, can be certified from the junior to the senior high school. This must be uniformly the case regardless of the program of studies or the pupil-load in the junior high school.

STANDARD PRIVATE SECONDARY SCHOOLS

In so far as facilities permit standardization service is given to private secondary schools on the same basis as that afforded to the public schools. This is done only upon request of the private school desiring the service. The number of such schools that meet the state standard is small, there having been only three in 1924-25 and the same number in 1925-26. The same three schools listed in 1924-25 were listed again in 1925-26. They are named below:

The English Classical School (Co-educational), Tampa, B-Senior.

Convent of Mary Immaculate (Girls), Key West, B-Senior.

The Cathedral School for Girls, Orlando, B-Senior.

The total number of high school pupils reported by these schools for the two years was 176 and 175, respectively.

STANDARD HIGH SCHOOLS FOR NEGROES

In 1924-25, Central Academy, the public high school for negroes at Palatka, met requirements and was listed as a standard high school for negroes, the first that the state has ever had. The number of high school pupils in this school during the year mentioned was thirty-three. The principal is Clarence C. Walker, Sr. Last year, 1925-26, this school was again listed as standard and one other negro school was added to the list, namely, the Lincoln High School, Gainesville.

Negro schools will be listed as standard as rapidly as they are able to meet requirements. The chief obstacle seems to be that of securing properly qualified teachers.

WHAT BECOMES OF THE HIGH SCHOOL GRADUATES?

TABLE 2.

Information Concerning Last Year's Graduates, as Reported
1925-26

In Higher Institutions

University of Florida	433
Florida State College for Women	368
Stetson University	65
Southern College	57
Rollins College	26
Other Colleges	492
Total	1,441

Engaged in Occupations

Farming	50
Teaching	131
Trades	113
Business	296
Other Work	224
Unemployed	89
Unknown	620
Total	1,523
Whole number of graduates	2,964

The table just above shows what information the principals of Florida had in their offices on October 1, 1925, regarding their graduates for 1924-25.

It is regrettable to note that 21 per cent (620) of those who graduated in June, 1925, had been "lost" before October of the same year.

Since admission to college usually requires a certificate from the high school, it may be fairly safely assumed that very few of the 620 pupils unaccounted for were among those who entered college. Assuming this, it is significant to note that approximately 50 per cent (48.6) of Florida's high school graduates enter college. Of this number, in 1925-26, 30 per cent entered the University of Florida and 25.5 per cent entered the Florida State College for Women. Thus, 55.5 per cent, only, of the graduates of Florida high schools who entered college in 1925 found a place in the State's institutions of higher learning. Only 10.4 per cent of the graduates entered college this year are reported as having entered private colleges in Florida. It is of interest to note that 34.1 per cent of the graduates entering college chose institutions outside of Florida.

The graduates of Florida high schools are at least energetic as 814 (or 27.5) per cent of the whole number graduating in 1925 were in employment in October of the same year.

Keeping up with their graduates for the purpose of giving service in a number of forms is a project that is worthy of more careful attention on the part of the high school principals.

WHERE ARE FLORIDA HIGH SCHOOL TEACHERS EDUCATED?

TABLE 3.

1925-26 (Full-time teachers)

	No.	Per Cent
Southern College	5	.5
Stetson University	24	2.3
University of Florida	89	8.6
Florida State College for Women	187	18.1
Institutions out of the State	714	69.2
No. not reporting college training	13	1.3
Total	1,032	100.0

Table 3 just above shows that of the 1,032 full-time high school teachers in 1925-26, 69.2 per cent of the number received all of their college or normal school training in institutions outside of Florida. In the number attributed to the colleges in Florida a teacher was included if even a summer term from that institution was reported. It is, therefore, seen that not all of those credited to the colleges within the state received all of their training above the high school level in the state. Florida drew on institutions outside of the state last year for 69.2 per cent of her high school teachers. All of the colleges in Florida, private as well as state institutions, had afforded any training whatever for only 29.5 of the state's high school teachers.

It may be assumed with a fair degree of safety that practically all of the 13 per cent listed as "Number not reporting college training" received little or no such training.

Attention should be called to the fact that high school principals are not included in this table. If such were the case the percentage for the University of Florida would be materially raised and it is likely that the percentage for each of the other institutions would be raised somewhat.

When one considers the fact that within the numbers shown as having been educated in Florida institutions are included all those who have attended at any time or for any purpose and that undoubtedly many of these received little or no specific training for teaching the problem takes on a still more serious aspect.

It can be said safely without any fear of valid contradiction that the greatest need of Florida high schools today is that of better trained class-room teachers. Is Florida doing her just share in an effort to meet this need?

WHAT IS THE ANNUAL TURN-OVER AMONG FLORIDA HIGH SCHOOL TEACHERS?

TABLE 4.

Teachers in New Positions—	1924-25.	1925-26
Number full-time teachers.....	723	1,032
Number part-time teachers.....	87	89
Total number teachers	810	1,121
Percentage of teachers in new positions..	43	53.4

This table deals only with the teachers in grades nine to twelve, inclusive, in standard high schools during the years shown. The increase in the number of teachers in new positions in 1925-26 over the preceding year is not encouraging. When so large a percentage of teachers are in a new position each year there must be a reason. Teachers do their best work, as a rule, not the first year that they are in a certain position, but through years of continuous service in which they may take advantage of experience and knowledge gained concerning community, school, and individuals.

Provision for better pay for teachers' services and a more comprehensive program of teacher training on the part of the State would result in greater stability in this endeavor and in larger numbers of Florida young men and women entering this field of work. Although Florida gains many excellent teachers from other States, she needs more teachers in her high schools who have been trained in Florida, and who know something of the traditions, needs, resources and possibilities of Florida.

THE STATUS OF THE FLORIDA HIGH SCHOOL PRINCIPAL

An attempt is made here to present a few important facts relative to the principals of the 153 standard Florida high schools in 1925-26. Comparison is made, in a number of instances, between facts herein cited and those presented in Bulletin, 1925, No. 24, U. S. Bureau of Education, entitled *Status of the High School Principal*, representing a study made by Dr. Dan Harrison Eikenberry, of the University of Missouri. An effort is made to answer such questions as: Where were the principals trained? What is the education of the principals? What degrees do the principals hold? In what subjects did the principals specialize? What salaries do the principals receive? How many principals have supervision over an elementary school in addition to their duties as high school principal? What is the annual turn-over among Florida high school principals?

TABLE 5.

WHERE ARE FLORIDA HIGH SCHOOL PRINCIPALS TRAINED?

(1925-26 Reports from 153 Schools.)

	No.	Per Cent.
University of Florida	65	42.5
Florida State College for Women.....	6	3.9
Stetson University	5	3.3
Florida Normal Institute	1	.6
Institutions out of the State.....	76	49.7
Total	153	100 0

Table 5 is read as follows: "Sixty-five of the 153 principals of standard high schools in 1925-26 were trained by the University of Florida," and so on. Approximately 50 per cent (49.7) were trained outside of the State. This means that these principals have received no training whatever within this State.

TABLE 6.

EDUCATION OF THE PRINCIPALS

Type of Institution	Normal School			College or University		
	Fla.	South Atlantic States	U. S.	Fla.	South Atlantic States	U. S.
Under 1 year.....	28	1	13	11		1
1 to 1½ years.....	8	6	78	8	3	66
2 to 2½ years.....	33	4	179	13	5	126
3 to 3½ years.....	10	3	74	10	13	116
4 to 4½ years.....	6	1	72	67	77	1029
5 to 5½ years.....	1		2	22	5	36
6 years or more.....			2			14
Total	86	15	420	131	103	1388
Per cent	54.2	14.8	27.8	85.6	100	92.1
Median	2.4	2.1	2.7	4.7	4.4	4.4

NORMAL SCHOOL TRAINING

In the study made by Eikenberry it was found that the principal of the standard high school is not a normal product. Of the 1,510 principals involved, only 420, or 27.8 per cent, report normal school attendance. Only 14.8 per cent of those in the South Atlantic States have attended normal school. Eighty-six, or 54.2 per cent, of Florida principals (Table 6) have attended normal school. This does not mean that their only training was obtained in the normal school, as the same individual is counted in the "Normal School" column and in the "College or University" column when he has received both types of training.

COLLEGE OR UNIVERSITY TRAINING

Eikenberry, in his study including 1,510 principals, says: "The principal of the fully accredited public high school is college or university trained." Ninety-two and one-tenth per cent of the principals in his study had received college or university training, while 85.6 per cent of Florida principals have received such training. Therefore, it appears that not so large a proportion of high school principals in Florida are college trained as is the case with principals over the country at large.

The median time that Florida high school principals have spent in normal school is 2.4 years (Table 6), which is slightly more than the figures for the South Atlantic States (2.1) and a little less than that for the United States (2.7). The median time spent in college or university by Florida high school principals is 4.7 years, which is more than the median for the States of this section (4.4) and for the United States (4.4).

Thus it seems that although fewer of Florida's principals have received advanced training, those who have been so trained have spent a longer period in training.

TABLE 7.

DEGREES HELD BY HIGH SCHOOL PRINCIPALS, 1925-26.
(Distributed according to class of school.)

CLASS OF SCHOOL.

DEGREES HELD.	100 or Fewer.	101-200	201-300.	301-500.	501-1,000.	1,001-2,000.	2,001 or More.	Total.		Per Cent.	
								Florida.	U. S.	Florida.	U. S.
None	25	6						31	136	20.3	12.3
Normal Diploma											
Only	3				1			4	12	2.6	1.1
Bachelor's Only	49	23	7	8	8			95	745	62.1	67.1
Bachelor's and Master's Degree	7	7	6	1			2	23	200	15.0	18.0
Bachelor's, Master's and Doctor's Degree									16		1.4
Total	84	36	13	9	9		2	153	1,109	100.0	100.0

Table 7 shows the degrees held by Florida high school principals and affords some comparison with the findings for the United States as revealed in Eikenberry's study. Almost one principal in six in Florida holds no degree at all. Most of these are in the small high schools. Not so large a percentage of Florida principals hold the bachelor's degree, or both the bachelor's and the master's degree as is the case with the United States at large (Table 7.) In short, Florida does not compare favorably in regard to the high school principals' degrees.

TABLE 8.

SPECIALIZATION OF PRINCIPALS, 1925-26.

Subjects—	No.	Per Cent.
Education	55	35.9
Psychology	5	3.3
Academic Branches	79	51.6
Number failing to report.....	14	9.2
Total	153	100.0

More than 50 per cent (51.6) of Florida's principals have specialized in academic branches rather than in pro-

fessional subjects, as revealed by Table 8. A little more than a third, or 35.9 per cent, of Florida's high school principals have specialized in education.

TABLE 9.

SALARIES OF HIGH SCHOOL PRINCIPALS.
(Distributed according to size of school.)

Salary—	Class of School—		Total.
	100 or Fewer.	More than 100.	
\$1,000-\$1,199	3	..	3
\$1,200-\$1,399	8	..	8
\$1,400-\$1,599	9	..	9
\$1,600-\$1,799	17	..	17
\$1,800-\$1,999	11	3	14
\$2,000-\$2,199	12	5	17
\$2,200-\$2,399	10	2	12
\$2,400-\$2,599	11	13	24
\$2,600-\$2,799	5	6	11
\$2,800-\$2,999	1	3	4
\$3,000-\$3,199	4	12	16
\$3,200-\$3,399	..	2	2
\$3,400-\$3,599	..	1	1
\$3,600-\$3,799	1	9	10
\$3,800-\$3,999	..	1	1
\$4,000-\$4,199	..	3	3
\$4,200-\$4,399	..	1	1
	92	61	153
Median U. S.	\$1,969.00	\$2,508.00	\$2,314.00
Median Florida ...	1,845.00	2,900.00	2,838.00

Table 9 shows the salaries of Florida high school principals, distributed according to size of school. Approximately 61 per cent (92) of the high school principals of the State are in schools with fewer than 100 pupils enrolled. The median annual salary of these principals is \$1,845, while that for the United States for principals in this class of school is \$1,969, as shown by the Eikenberry study. The same study shows the median annual salary of principals in schools with an enrollment above 100 to be \$2,508. The median annual salary of Florida principals in this class of high schools is \$2,900. Thus, it appears that the principals of the larger high schools in Florida are the

only ones receiving a salary that compares favorably with that paid principals elsewhere.

It should be remembered, in connection with all comparisons that are drawn between conditions in Florida and those revealed in the study mentioned (Eikenberry), that in Florida the high school principal performs many of the functions performed by city superintendents in other States. In other words, it is likely that a fairer basis of comparison as to salaries and some of the other items shown, would be gained if city superintendents in other States were compared with high school principals in Florida.

PRINCIPALS' SUPERVISORY AUTHORITY

In 1925-26, 136, or 88.9 per cent, of the 153 principals of standard high schools in Florida had supervision over the elementary school or schools connected with the high school. Hence, practically nine out of ten Florida principals are concerned with the supervision of the elementary school as well as with the high school.

It is interesting to note, by comparison, that Eikenberry's study found only 27 per cent of the principals of his study (United States) who had supervision over the elementary school.

THE ANNUAL TURN-OVER AMONG FLORIDA HIGH SCHOOL PRINCIPALS

Of the 153 high school principals in 1925-26, there were 56, or 36.6 per cent, in new positions; 44, or 28.8 per cent, in the same position for the second year; 11, or 7.2 per cent, for the third year; 13, or 8.5 per cent, for the fourth; 12, or 7.8 per cent, for the fifth; and only 17, or 11.1 per cent in positions that they had held for more than five years.

OBSERVATIONS REGARDING THE HIGH SCHOOL PRINCIPALSHIP

An examination of the facts presented above forces one to the conclusion that the high school principalship in Florida is an unstable position. It should be professionalized and salaries paid so as to secure for the teachers of Florida the highest type of leadership.

In 1925-26, the 153 principals had under their supervision 3,332 teachers who were teaching 96,471 pupils. Surely this is an enterprise worthy of the best thought and effort that Florida can afford. A larger financial investment in the matter of salaries, intelligently applied, with sufficiently high requirements as to qualifications, would produce vastly richer returns than are now evident.

What Eikenberry says for the country as a whole is equally true for Florida: "The principalship will not be really professionalized and recognized as such until the principal's training is commensurate with the heavy duties and responsibilities connected with it." The State should take the initial step in the professionalization of the principalship by adopting requirements for a definite program of academic and professional training. This can be done through certification. More than one type of certificate for the high school principal might well be provided with the highest of these constituting a "reward for real merit, an attestation of the fitness of the holder to serve as a leader of teachers and pupils."

TEACHER TRAINING IN THE HIGH SCHOOLS

There are almost four times as many high schools offering teacher-training courses at present as was the case in 1923-24, the increase in number going from 8 such schools in 1923-24 to 31 at this time (October 1926).

The increase in the number of pupils pursuing such courses is still greater, there having been an increase of approximately 460 per cent (from 121 to 677) over the same interval.

A total of 179 graduates from such courses to date have received teachers' certificates upon their diplomas.

The State of Florida is investing directly from State funds this year a total of \$15,500, since each approved teacher-training high school receives a subsidy of \$500 from the State. The present supervisory and office facilities of the State Department of Public Instruction are not adequate to the task of giving the direction to this work that it would seem to deserve. Would not the State be doing an effective service directly for the rural schools if the training of these teachers were more carefully guided in order to give them a better equipment for their task?

TABLE 10

THE ELEMENTARY SCHOOL AND THE HIGH SCHOOL

In some quarters there is a tendency to sacrifice the elementary school for the high school. This is evidenced by the fact that the high school in many places in the state has a nine-months term while the elementary school has only eight months. This practice has become a well-defined policy in some localities and the impression seems to have grown up in the mind of the public that an eight-months term is entirely adequate to meet the needs of the children of the elementary school. Almost invariably the teachers in the high school are paid larger salaries than are the teachers of the elementary grades. This means often that the high school teachers have a superior preparation for their work, though this is by no means uniformly the case. High School standardization requirements—those of the State Department of Public Instruction and those of the Association of Colleges and Secondary Schools of the Southern States—seem to be largely responsible for this state of affairs.

It cannot be shown that there is a greater need for better-trained, and consequently better-paid teachers in the high school than in the elementary school. It has never been established that the task of teaching pupils of high school age is any more difficult than that of teaching pupils in the elementary school; nor has it been shown that pupils of elementary school age are able to complete the work of a typical school year in a shorter period of time than are pupils of high school age. The policy of spending more money on the high school at the expense of the elementary school is indeed a short-sighted one. If the elementary school sends to the high school pupils who are poorly prepared for the work that should be done on the high school level the work of the high school is thereby retarded and it usually means that graduates will be sent out without the educational equipment that the completion of a high school course should afford.

Florida is able to support both her elementary and her high schools on an adequate basis. The high school could not afford to have a shorter term, or to sacrifice in the quality of teaching, or in salaries in order to attempt to improve these matters in the elementary school. The length of term, the salary level, and the general standards

of attainment in the elementary schools of the state should be raised, as has been evidenced by the recent standard tests that have been given and surveys that have been made. No one division of a school system can possibly profit at the expense of another. The newly inaugurated plan for the standardization of the elementary schools of Florida will result beneficially to the high schools as well as to those of elementary rank. The time should soon come when no high school that is connected with an elementary school should be listed as standard unless the elementary school can be so rated also, and when no pupil would be admitted on credentials only to a standard high school unless he has come from a standard elementary school.

THE ANNUAL CONFERENCE OF FLORIDA HIGH SCHOOL PRINCIPALS.

During the past seven years an annual conference of Florida high school principals has been held at the University of Florida with the State Supervisor of High Schools acting as Director of the Conference, and the Teachers' College of the University of Florida co-operating and acting as host. Attendance, interest and achievement have shown a steady growth throughout these years.

In addition to the general values that come from such gatherings the major work of the conference has been accomplished through a series of committees whose efforts have resulted in the preparation of material for publication of bulletins by the State Department of Public Instruction on the subjects of English, mathematics, and the sciences, for the use of teachers of these subjects in the high schools of Florida. These separately published bulletins have taken the place of the former single publication called "A Course of Study for Florida High Schools."

At the Seventh Annual Conference of Florida High School Principals, held in Gainesville on April 15-16 last, the appointment of a series of committees was authorized by the conference in order to continue the work of the preparation of bulletins for publication and for the general improvement of education in the State. At this time several of these committees are undertaking research work of considerable importance. Committees to study the following subjects have been appointed as authorized:

State-wide Reading Improvement Program.
 Records, Credits, and Nomenclature.
 Relationship Between High School and College.
 Uniform Text Books.
 Teacher Retirement Law.

Supervision.

Administration.

Permanent Organization of the High School Conference.
 Hold-over Committee on Resolutions.

Committees to prepare material for the publication of bulletins on the following high school subjects:

The Social Studies.

Modern Languages.

Latin.

Home Economics.

Manual Arts.

Committees on the following subjects are still to be appointed: Music, Art, and Business Training.

It is likely that the conference to be held in 1927 and probably several of the succeeding conferences will center largely around the reports of the committees named above.

A PROGRAM OF STATE HIGH SCHOOL SUPERVISION.

During the past summer a letter came to this office from another State Department of Public Instruction, containing the following request:

"We shall be grateful if you will tell us three or four points of emphasis in your high school program for the next year. It is our intention to stress good teaching, visual instruction, pupil guidance, and the six-year high school for rural schools."

The following answer was sent:

"The three or four points on which we shall place emphasis in our program of high school supervision during the coming year are: (1) the curriculum, which necessarily involves the question of the junior high school, the six-year high school, and other types; (2) the assignment of teachers to work within their major fields of preparation, both academic and professional; and (3) the improvement of class room instruction."

Such means as those listed below will be employed in efforts to obtain the aims stated:

1. Curriculum Revision—

- (a) Publications containing requirements and suggestions as to desirable programs of studies for the different types of high schools.
- (b) Letters containing specific suggestions formulated in the light of school reports submitted to this office, or from the study of particular programs submitted for criticism and suggestion.
- (c) Conferences with teachers and principals on the occasion of official visits.
- (d) Office conferences.
- (e) Principals' annual conference.

2. The Assignment of Teachers to Subjects within their Major Fields of Preparation—

- (a) Regulations relative to teacher certification and high school standardization.
- (b) Letters to principals following examination of standardization reports.
- (c) Official visits.

3. The Improvement of Class Room Instruction—

- (a) Publication and distribution of bulletins on the teaching of the various high school subjects.
- (b) Conferences with principals, department heads and teachers on the occasion of official visits.
- (c) Class room visitation followed by conference with teacher or principal.
- (d) Encouraging the more complete departmentalization of instruction and the placing of the teacher within his preparation field.
- (e) Correspondence regarding particular points.

THE FUTURE OF STATE HIGH SCHOOL SUPERVISION IN FLORIDA

With twice the number of high school pupils and teachers (grades 9-12) in the state now that it had a short four years ago it is evident that the task of state high school supervision has grown faster than have the state's facilities for caring for the service. The rapid development of the junior high school with its consequent bringing of seventh and eighth grade pupils and teachers into the field of secondary education introduces problems that were not

thought of a few years ago. The evident need of intelligent guidance of Florida's rapidly developing program of secondary education stands out with alarming prominence in view of the severely limited facilities for meeting this need. A large opportunity is ahead of the State Department of Public Instruction if suitable provisions are made for giving to the high schools of Florida the service that they are now seeking.

Because of the development already attained and the unmistakable evidences of still greater growth it is recommended that an assistant state high school supervisor be provided for the next biennium. The need of direction of teacher training in the high schools alone would justify this addition to the state forces.

Field work can only be effective as it is supported by adequate work in the office from which the field work emanates. The work of high school supervision stands in immediate need of a full-time combination office clerk and stenographer, experienced and well-trained. In addition to this worker if provision could be made for regular additional assistance during seasons when the work is too heavy for the regular staff more desirable results could be accomplished.

There is now unmistakable evidence of the need for intelligent guidance among the high schools of the state in connection with the introduction and the teaching of such subjects as the manual arts, fine arts, (including music), and the commercial branches. The junior high school presents a whole series of problems along these lines. Enormous waste and misdirected educational effort could be saved by the provision of specialists to give service to the schools in connection with these and other subjects that require especial consideration. Attention is respectfully called to the necessity for devising a plan for taking care of these educational needs.

* Not reported.

(.) In some reports only number of pupils was given, in some only number of teachers given.

x In some reports number of boys and girls was given as a total instead of separately.

(—) In determining average salaries, number of teachers in reports not stating salaries was omitted.

CHAPTER V

HEALTH AND PHYSICAL EDUCATION

Probably no other movement has ever struck the public schools with such great force as that of health and physical education. The subject, started by health agencies out of the school, is permeating the entire school system, and health is now accepted by school authorities as the first cardinal principle of education.

At present 33 states have laws regarding the teaching of health and physical education in their public schools. Fourteen states have appointed State Directors of Health and Physical Education, and the majority of State Departments of Education have made very definite requirements regarding the training of teachers for this work. Yet with all of this, many questions still press for answer.

What is health education?

Should health be taught in our public schools?

Why is the health of the child a responsibility of the school administration?

What is considered a complete school health program?

What is Florida's program?

How does it compare with programs of other states?

What has been accomplished?

What is yet to be done?

How can best results be secured?

That our questions may be answered with unbiased opinions, let us face facts squarely. In placing these facts before the reader for consideration and study of the health school problems, the writer cannot do better than quote the opinion of nationally known authorities. Opinions which have been generally accepted and have been used as guide posts by the leaders in the field of health and education for the promotion of better health.

Health Education.—In the report, 1925, of the Joint Health Committee of the American Medical Association and the National Education Association, we find the following definition of health education: "In the program of the public schools, health education is the process of developing ideals, habits and knowledge conducive to the

maintenance or improvement of such physical, mental, emotional, and social well-being, as results in a normal, happy and useful life." Our schools are facing the problem then, that health is not primarily freedom from disease and removable physical defects. It is concerned with positive constructive building.

Should Health Be Taught In Our Public Schools.—"The school, in its very nature, is completely constituted to act as a disease center, as assembler and distributor of children's diseases in the community," says the report of the Health Committee on Curriculum Reconstruction of the National Education Association. Yet we know that with intelligent and efficient administration that the school can become a successful center of health control and health influence.

Definite studies have been made throughout the United States by the Bureau of Education in an endeavor to discover the relation that exists between physical defects and the quality of the pupils' work in school. Through these studies there has been shown a direct connection between physical defects and scholarship. "It goes without saying," states the Bureau of Education, "that the child's best health is essential to his best progress in school, as well as to his best work and fullest enjoyment in after life, and it follows that the school should do what it can, not only for pedagogical reasons but for humanitarian reasons to lead the child to his healthiest life." We cannot hold the home entirely responsible for instruction in the care of the body, any more than we can demand of the home the complete responsibility for character development, moral standards and mental progress—the school is too powerful in its influence.

This influence should be utilized to build up a nation of strong healthy citizens thru instruction in the proper care of the boy and hygienic living. Health education then should be taught in our public schools just as any other school subject.

Health Promotion the Responsibility of the School Administration.—From the report of the National Child Health Council, "Health for School Children," we quote the following: "In emphasizing the necessity for community co-operation, one matter of vital importance naturally arises for consideration—the relation between the Board of Education and the Board of Health. Regard-

ing the proper function of each board so far as they deal with health work in the schools, there is great diversity, both of theory and practice. One essential, however, should never be lost to view: the necessity for thoroughgoing co-operation between these two public agencies. No matter how their work and responsibilities may be divided they must co-operate heartily if satisfactory work is to be done. To make its position in this matter clear, the committee has drawn up the following statement:

1. "The responsibility of the Board of Education for all educational work is clear, while the responsibility for control of communicable diseases rests with the Board of Health (through the supervision of whomsoever it may delegate to take charge of this work.)

2. "Certain parts of the school work, however, are not unquestionably subject to the jurisdiction of either board, and variations in local conditions make it impossible to lay down any universally accepted rule as to the administration of such matters as the health supervision of pupils. In some states this is done under the law by the Board of Health, in others by the Board of Education.

3. "If school health work is to be conducted efficiently, the two boards must co-operate and any arrangement which is made for its conduct should be entered into only after they have jointly approved a written agreement clearly defining the basis for co-operation and providing for centralized supervision of all phases of the program. Even after such an agreement has been made, there should be frequent consultation between the two boards, or their appropriate committees, and any person or persons who are employed to administer the work.

4. "Where it is possible to find a person mutually agreeable to both boards and qualified by training and ability to take charge of all phases of the school health work, he should be appointed under the terms of an agreement of the kind mentioned in the preceding paragraph. Such a person should, in all cases, have the powers, privileges and obligations of a member of the school staff regardless of the source of his salary or supervision."

From the foregoing statement you have seen, then, that the Board of Education is directly responsible for the teaching of health in the public schools; and that the organization and supervision of the entire program is the business of the school, while certain phases of health pro-

tection shall be administered by the Board of Health. But even this requires great co-operation on the part of the school.

A Complete School Health Program.—The writer quotes from the Fourth Year Book of the Department of Superintendence of the N. E. A. "The scope and content of the field of health and physical education as an administrative department includes logically these three phases: health service, health instruction, physical education.

1. "Health service is a convenient term to cover the various protective measures adopted by the school to conserve and improve the health of the children—Health service or supervision includes then the following phases of health protection and health promotion: health examinations, correction of remediable health defects, daily inspection, school sanitation, first aid and safety provisions, immunization against infectious and communicable diseases, hygiene of instruction, health of teacher, janitor or custodians, officials and employees coming in contact with children.

2. "Health instruction is the sum of experiences in school and elsewhere, which favorably influences habits, attitudes and knowledge relating to individual, community, and racial health. The program of health education must take advantage of many experiences or situations in the work of health service or health supervision, and also in the instruction given in physical education activities.

3. "Physical education includes the big brain muscle activities which are valuable in the growth and development of the child."

The child is a unit, and all the factors that affect health are tied up together. The sanitation of his immediate environment is important. Wise human guidance and understanding are essential. His physical hygiene is vital not only for his physical life, but for his mental life. All of these factors contribute to a well rounded, normal, healthy child life. All of these channels of contribution to child welfare must be utilized if we are to take advantage of certain outstanding immediate opportunities in the field of child health conservation.

Florida's School Health Program.—National Authorities state that Florida has one of the best school health programs of any state in the Union. A definite study has been made of all Florida laws and regulations pertaining to school

health. These laws and regulations have been classified under the three phases of a complete school health program, health instruction, health supervision, and physical education. For convenience, and to meet local needs, these laws and regulations were arranged under six general principles: i. e., health training and instruction; physical activities; health supervision of pupils; hygienic arrangement and administration of school program; hygiene of the school plant; and health supervision and training of teachers. A score card was formulated from these state laws and regulations and issued from the State Department of Public Instruction for the purpose of guiding the schools in the organization of a complete health program. This score card has been pronounced by national authorities in the fields of health and education as "one of the most forward movements in school health work, and a most complete score for the study of a school health program." Below is given a copy of the score card.

HEALTH EDUCATION SCORE CARD FOR PUBLIC SCHOOLS FOR EVALUATING SCHOOL HEALTH PROGRAM

The purpose of this score card is to arouse interest in better school health education throughout the State of Florida, to aid the State Department of Public Instruction, the County Superintendents, and the individual schools and communities in securing definite knowledge of existing health conditions, and to promote action in remedying such deficiencies as are found to exist. The score card is further formulated for the purpose of co-ordinating all State health promoting organizations and agencies that they may be of greater service to the public schools of this Commonwealth.

The final scoring is to be compiled by the County Superintendent. The records for the individual schools may be submitted to the Superintendent by the principal of the school, or the former may obtain such information upon his visits to the school. Services of persons especially fitted by training and experience may be utilized to assist in the compilation of the data for the individual schools and final county report.

The score card has been arranged under the six general principles of a school health program as outlined by the

National Education Association and the American Medical Association: (1) Health training and instruction, (2) Physical education, (3) Health supervision of pupils, (4) Hygienic arrangement and management of the school program, (5) Hygiene of the school plant, (6) Health supervision and training of teachers. To each division a maximum of 100 points has been assigned, making a possible total rating of 600 points. The maximum score under each general topic is designated. The score is to be worked out for each school according to the score card, and a composite score for the county compiled.

HEALTH EDUCATION SCORE CARD.

	Maxi- mum Score	No. Entries	No. Com- pleting	Per Cent	Actual Score
I. HEALTH TRAINING AND INSTRUCTION:					
1. Definite period for daily specific health instruction and recording health rules as per State Course of Study	25				
2. Modern Health Crusade used by grades 3-9, inclusive, as per outline in State Course of Study	15				
3. Definite nutrition instruction thruout all grades	15				
4. Definite safety education thruout all grades	10

4. Available state health education facilities used	20				
5. Health books, monthly health publications, and bulletins used as reference material by teachers and pupils	15				
	100				

EXPLANATION FOR SCORING

Section I. HEALTH TRAINING AND INSTRUCTION

1. At least fifteen minutes daily is required in the elementary grades for definite health instruction. See State Course of Study for Elementary Schools. In High Schools approximately one-fourth of the time allotted for physical education is to be devoted to specific health instruction. See State Bulletin on Health and Physical Education in High Schools. Score given according to percentage of grades having this definite period of instruction.

2. It is recommended that Modern Health Crusade Score cards be marked during the fifteen minute period of health instruction as a method for checking health rules. Points shall be credited only for those pupils in 3 to 6 grades who keep at least 54 chores per week for a period of 24 weeks. Membership in the Knights of the Round Table for 7 to 9, inclusive, are also counted on same basis. Information concerning the Crusade may be obtained from the Florida Public Health Association, Jacksonville, Florida.

3. Definite nutrition instruction throughout all the grades may be given in the period for specific health training or in correlation with other school subjects. Lesson plans and information may be obtained from the Home Demonstration Division, Florida College for Women, Tallahassee, Florida.

4. Definite Safety Education throughout all grades may be given in the period for health instruction or in correlation with other school subjects. Bulletins and information may be obtained from State Department of Public Instruction.

5. Observance of Health and Temperance Day. See School Laws for regulations. Write State Superintendent of Public Instruction for programs.

6. Evil effects of alcoholic beverages and narcotics. See State regulations in Florida School Laws.

7. Health instruction may be easily correlated with all other school subjects. Full credit shall be given if there is correlation with at least three other subjects on an average of two lessons per week throughout the school year.

Section II. PHYSICAL ACTIVITIES.

1. The definite period allotted each day for participation in directed physical activities in the elementary grades shall be not less than fifteen minutes. Thirty minutes inclusive of recess period is preferred. This period should be used for directed play. See Supplement in State Course of Study for requirements and suggestions for organization.

2. For physical education in High Schools a minimum of two forty-five minute periods per week for four years is required by the State Department of Public Instruction. Approximately one-fourth of this time to be devoted to specific health instruction. See State Bulletin on Health and Physical Education for High Schools.

Section III. HEALTH SUPERVISION OF PUPILS.

1. Health examinations may be secured through the State Board of Health. Credit may be given if pupils are examined by local physicians provided the State Board of Health cards are used and State regulations complied with. Score for school is made on the percentage of pupils examined.

2. Dental inspection shall be given by a dentist. One-half credit may be given if a thorough examination is given by a physician. Score for school is made on the percentage of pupils examined.

3. The score is to be checked on the number of corrections based on number of remediable defects as revealed by the health examinations, such as, teeth, nose, throat, eyes, intestinal worms, skin diseases, nutrition, etc.

4. See law in Sanitary Code State Board of Health for exclusion from school. Diagnosis is a medical problem, but the school shall be given credit, not on the number of pupils excluded from school on account of communicable diseases, but on the statement that this is the policy of the school, with the objective that every effort is made by the school to avoid epidemics.

5. See Supplement in the State Course of Study for weighing and measuring. This includes high school students as well as pupils in elementary grades, credit to be given accordingly.

Section IV. HYGIENE ARRANGEMENT AND ADMINISTRATION OF SCHOOL PROGRAM.

1. See School Laws for State requirement. Length of school day shall include required time for health and physical education. The day may be lengthened to include this time.

2. Wholesome hot lunches served under approved sanitary conditions and under supervision of the school authorities. The lunch shall include fresh fruits, green vegetables and milk in some form, i. e., bottled milk, cream soups and vegetables, cocoa, etc. Lunch rooms under management of persons outside of the school and over which the school management has no supervision, and in which cheap candies and soda waters are sold will receive no credit. Information on organization and management of school lunches may be obtained from Home Demonstration Division, Florida State College for Women, Tallahassee, Florida.

3. In schools where hot lunches are not possible, schools may receive credit for supplementing the cold lunch brought from home each day by pupils, or by serving one hot dish which incorporates milk, such as cream soups and vegetables, cocoa, etc. Add score for 2 and 3 for schools having approved hot lunch.

4. See Florida School Laws for requirements for fire drills. Write State Department of Public Instruction for information on organization and management of fire drills in schools.

Section V. HYGIENE OF SCHOOL PLANT.

1, 2, 3. See School Laws for standards for sanitary toilets, pure water supply, and sanitary drinking facilities. Only those schools which come up to standard in each of the above items are to be given credit.

4. See School Laws for regulations concerning fire escapes and doors for the protection of pupils against fires.

5. Write State Board of Health for approved standards for lighting, heating and ventilation. For further information concerning State regulations of all equipment in this section write Sanitary Department, State Board of Health.

Section VI. HEALTH SUPERVISION AND TRAINING OF TEACHERS.

1. All teachers are required by law to have annually a physical examination and file certificates with the State Board of Health and County Superintendent. Blanks may be obtained from the County Superintendents or the State Board of Health.

2. Lack of cooperation of any teacher in any school or School or community health program at any time during the school term is often detrimental and should be scored against the school on basis of percentage.

3. Score on percentage of teachers who have had training in methods of health and physical education within the past four years.

4. There are in the State of Florida fourteen organizations who will help with some or all phases of the school health program. They are listed in the Supplement of the State Course of Study for Elementary Grades under the Florida Health Education Council. The use of all these organizations for every school either by their publications or field workers shall be counted as a perfect score. If not all, the percentage is worked out accordingly.

5. At least one monthly health magazine, three reference books, other than adopted texts, and bulletins from at least five State health promoting organizations shall be counted as a perfect score. The following list is recommended:

MAGAZINES: Hygeia, American Medical Association, 510 N. Dearborn Ave., Chicago, Ill., Price \$3.00 per year: The Nation's Health, Price \$3.00 per year.

BOOKS: Health Training in Schools—Danskil, Price, \$1.00 per copy, Florida Public Health Association, Jacksonville, Florida. Bancroft—Plays and Games for Home School and Community, MacMillan Co., Atlanta, Ga., Price \$2.40. The Child, his nature and his needs—Children's Foundation, Valparaiso, Ind., Price \$1.00 per copy.

BULLETINS: Pamphlets from five of any of the fourteen State organizations listed in the Supplement of the Course of Study for Elementary Grades.

It is recommended that as many as possible of the above publications be supplied to the schools by the County Board of Public Instruction and that these publications remain as the property of the school.

COUNTY LOVING CUP

To the county scoring the highest number of points in proportion to the school enrollment and the number of schools participating, a loving cup will be awarded for one year, this cup to become the permanent property of the county in which it is won for three consecutive years.

REPORTS

Final reports must be sent into the State Supervisor of Health and Physical Education, State Department of Public Instruction, Tallahassee, not later than July 1, 1926.

The program as outlined by the above score card is Florida's complete program of school health work. While every phase of the program is not under the direct supervision of the State Department of Public Instruction, it is the policy of the Department to promote all phases of the program by working in co-operation with organizations which are directly responsible for the various types of service, and to lead the county superintendents and schools to use the service offered.

In formulating the program for supervision of health and physical education from the State Department of Public Instruction, the following policies and activities were outlined:

1. Establish a department from which all school health education would be promoted.
2. Promote the State Course of Study in health and physical education.
3. Aid in co-ordinating the school health programs of all State Health agencies.
4. Work for the organization of a complete school health program.

In order to develop these policies the following activities were formulated:

1. Serve as a bureau of information on all school health subjects.
2. Concentrate efforts on training teachers for health work in the State Institutions of Learning and High School teacher-training classes.
3. Standardize school health supplies for use in schools throughout the State: i. e., weight charts, health inspection cards, score cards, etc.

4. Place stamp of approval of the Department of Public Instruction on approved school health bulletins issued by State organizations (that the work may be co-ordinated and that the schools will be more ready to accept the publications).

5. Serve in an advisory capacity to all State school health promoting agencies.

6. Promote activities of the Florida Health Education Council.

7. Assist in the organization of county-wide school health program based on the State outline.

What Has Been Accomplished: Since the Supervisor of Health and Physical Education has worked very closely with all State organizations who are doing definite pieces of school health work, an effort will be made to give here a brief report of results accomplished by this department and the outstanding organizations during the school year 1925-26. For clearness this will be classified under the three phases of the program—health instruction, physical education and health service.

1 *Health Instruction:*

Every effort has been made to lead the schools to follow the State Court of Study in health and physical education, both in the elementary and high schools. According to the State requirement at least fifteen minutes each day is to be devoted to definite health instruction in the elementary grades, and one-fourth of the time allotted for physical education is required for health instruction in the high schools.

Programs, outlines, ways and means of vitalizing this course of study have been offered in conferences, in meetings, and through correspondence from the State Department of Public Instruction. Through the work of the Florida Home Demonstration Agent, the American Red Cross, the Florida Public Health Association, the General Extension Division, and the Teacher Training Schools at the Florida State College and the University of Florida, the State Course of Study in health education has been greatly vitalized and motivated.

The State Home Demonstration Division, the American Red Cross and the County Nutritionists have promoted some very splendid work in nutrition instruction. Some phase of the nutrition program has been carried on by the County Home Demonstration Agents in thirty-five counties. Thousands of leaflets containing definite lesson

plans in nutrition instruction have been issued to the teachers, home demonstration clubs, and women's clubs in the State. Over 20,000 children have received definite nutrition instruction at least once per week through the Red Cross and local nutrition instructors.

Another means of motivating the course of study in the elementary grades and the junior high has been through the Modern Health Crusade as promoted by the Florida Public Health Association. During the past school year, 95,578 children have been enrolled in the Health Crusade. Of this number, 51,192 have kept at least 54 health rules per week for a period of twelve weeks, and 36,800 have kept from one to four rules per day for twenty weeks. This means that the children of our public schools are brushing their teeth, drinking milk, sleeping long hours with windows open, eating wholesome foods and practicing habits of body cleanliness, thus building a strong resistance to disease. In the Junior High schools 6,055 pupils have become members of the Knights of the Round Table, a program of group activities admirably fitted to the Junior High school age.

The General Extension Division has furnished health films, slides, posters, books and bulletins to the public schools. The part that this splendid material has had in the motivation of the school health program can never be estimated, but we know something of the power of visual instruction.

Teacher Training:

The strength and effectiveness of any school health work depends upon the training and personality of the individual class room teachers. The School of Education at the Florida State College for Women and the Teachers' College at the University of Florida have offered courses in health and physical education in both summer and winter sessions. At the University of Florida, every prospective teacher in the winter term is required to have at least one semester in methods of health instruction. In the Florida State College the course is elective. All Teacher-Training departments in high schools were reached either through correspondence or by personal visits. Programs, outlines and teaching materials were furnished these schools by the various State health agencies.

County Health Education Programs:

In conference with the County Superintendents, County Supervisor, School Nurse, Home Demonstration Agent,

Nutrition Worker, and Playground Supervisor, according to the existing personnel in the various counties, health education programs have been formulated, and mimeograph copies given to each teacher in seventeen counties. These outlines have been based on the State program as outlined by the Health Education Score Card and course of study. Twenty-eight counties made some effort to score their schools by use of the score card. Definite reports from these cards have not been tabulated.

2. *Physical Education:*

The State requires that every pupil graduating from a standard high school have one unit in health and physical education. This unit to cover a period of at least two years, preferably four. The minimum requirement is two periods per week, one-fourth of this time to be devoted to health instruction. In the elementary grades from 20 to 30 minutes each day is required for physical activities or directed play. Programs, outlines, and courses of study have been worked out with high school principal and physical education teacher. From the report of 141 high schools in the State only 14 reported as not offering any form of health and physical education during the past year. Most of the schools who did not give this instruction were in the larger towns where gymnasiums or playground space was not available. In most instances provisions are being made to correct this the coming school year. There are only thirty-two full time physical education instructors in the high schools of the State, but splendid programs have been worked out by schools where class room teachers and principals have directed the physical activities. There is only one County Supervisor, and one City Supervisor of Physical Education in the State.

In the elementary grades rapid progress has been made toward the promotion of directed play. Many schools now require the class room teachers to direct the children in at least one play period per day. Everywhere we have heard nothing but praise from the teachers for the results accomplished with the children through the direction of play activities. The General Extension Division issued a bulletin on play which has been most valuable to the schools.

3. *Health Service:*

Total number school children receiving physical inspection, 133,872, school year 1925-26.

Number inspected by School and Public Health nurses, 128,358.

Number examined by State Board of Health physicians, 4,069; other physicians, 1,445.

Total number of School and Public Health nurses in the State, 110; officially employed, 90; volunteer agencies, 20.

Florida has a law which requires the State Board of Health to examine every school child in the State at least once during the school term. Owing to the lack of adequate appropriation, this law cannot be enforced. The State Board has 14 Public Health nurses who do pre-natal and infant welfare work, and the inspection of school children in the small rural schools. Out of the 133,872 children who have received medical inspection this past year, 21,772 have been inspected by the State Board of Health nurses and 4,069 by the State Board of Health physicians, seven in number.

Through the work of the Director of the Bureau of Child Welfare and Public Health Nursing of the State Board of Health, the two Supervisors of Nurses and the District Nurses, every effort has been made to induce the county and city officials to secure public health nursing service. Rapid progress is being made along this line. The American Red Cross is very active in this movement in the State and many nursing services have been established through their activities.

Every effort is made by the nurses to make follow-up visits to every home in which a school child has been found to have remediable defects. In some sections members of Parent-Teacher Associations, Women's Clubs, and Junior Leagues have assisted the nurses in doing the follow-up, and arranging for the correction of defects. In some counties teachers encourage the correction of defects by means of wall charts. This latter effort has proven to be a very powerful method for securing correction of defects.

Hospital facilities for the correction of defects are very inadequate in Florida, but temporary arrangements have been improvised in various sections to meet the demands for this service to the school children. The State Health Officer reports that 54,746 children have been found by county and State workers to have one or more remediable defects. No record is given by the State Board of Health as to the number of defects found or the number of corrections made. However, reports from fourteen county nurses give 10,651 corrections made to date with 4,469 estimated corrections which will be made before school opens in the fall.

In a report of the school health service in the State, the State Health Officer made the following statement: "Inasmuch as the State nurses only make one round of the county each year, it is impossible to give number of corrections made. Whenever a defect is found, a follow-up visit to the home is made."

What Is Yet to Be Done:

Just as Education never reaches her final goal, although she has worked untiringly for centuries, so the final goal for health education cannot be attained in a few years. In Florida, as elsewhere, there is much yet to be done. In the words of Herbert Hoover, "There should be no child in America who:

Is not born under proper conditions.

Does not live in hygienic surroundings.

Does not have an opportunity for outdoor play.

Ever suffers from mal-nutrition.

Does not have prompt and efficient medical inspection and attention.

Does not receive primary instruction in elements of hygiene and health."

Until Florida can change the words in Herbert Hoover's statement from "there should be" to "there is," we cannot say that our task of bringing health and happiness to the child has been accomplished. The schools are the most powerful agency for the promotion of better health. Our responsibility, therefore, is great.

How Can Best Results Be Secured?

Tangible results in general health improvement, increase in weights, more alertness in school work, decrease in absentees and repeaters, and a better school morale have all been noted in the localities where the above outlined program in health education has been carried out. Money spent on health work has come back into the treasury many-fold. Yet to obtain best results there needs to be more concentrated effort, a continual remodeling and rebuilding of the program based on facts obtained through research. A survey of the school health conditions, both state-wide and local, is a great need. From the findings of this study definite plans of procedure should be formulated. The schools must awake to their great responsibility, and let their slogan be "Health first in Florida schools, not only in theory but in practice."

In order to accomplish lasting results with the school health program in Florida there should be:

Better trained teachers for the teaching of health.

Better facilities for training teachers.

Better co-operation of agencies in the promotion of the State Course of Study.

Better studies of existing conditions.

Better co-ordination of school health programs of State health agencies.

Better medical service.

Better co-ordination of health work in county and local units.

Better co-operation between school and health-promoting organizations.

Better co-operation between the home, the medical service, and the school.

Better pre-school health work.

In promoting the activities as outlined in the above report, and in measuring results of efforts, the writer has tried to show that Florida's program of health in the public schools has been developed by co-operative efforts on the part of all organizations and individuals interested in the welfare of the school child. The County Superintendent, the teachers, the Public Health nurses, the Home Demonstration agents, the Social Workers, the physicians, the dentists, the Home Economics teachers, the Physical Education instructors, all have had a great part in whatever accomplishments have been made. While the State Department of Public Instruction has been guiding, organizing, suggesting, and supervising in all phases of the school health program, the final results can be attributed to the "everlasting team work of every bloomin' soul." As stated in the beginning, the child is a unit, and all factors that affect health are tied up together. All the channels of contribution to child welfare must be utilized if we are to take advantage of certain outstanding immediate opportunities in the field of child health conservation.

Respectfully submitted,

REBA F. HARRIS,

State Supervisor of Health and Physical Education.

CHAPTER VI

NEGRO EDUCATION.

PROGRESS AND STATUS OF NEGRO EDUCATION IN FLORIDA.

Section one (1) of Article 12 of the Constitution of Florida reads: "The legislature shall provide for a uniform system of public free schools, and shall provide for the liberal maintenance of the same."

Every one has known all the time that there has never been any uniformity throughout the State as between the several counties, nor within the several counties as between the several districts, nor within the districts as between the individual schools, nor anywhere as between the white and negro schools.

Section 12 of Article 12 provides: "White and colored shall not be taught in the same school, but impartial provision shall be made for them both."

Every one knows that the latter clause of this section has been almost uniformly disregarded. The operation of the system has been approximately uniform in the disregard of the clause referred to.

However, it is gratifying to be able to say that in the provisions for white and colored schools made by the public school authorities there is more nearly uniformity now than at any time in the history of the State.

One of the old line conservative West Florida counties has provided that for the school year 1926-1927 the terms shall be the same in length for both white and colored schools, and they have made very substantial increases in the salaries of negro teachers, which had heretofore been comparatively low.

INSTITUTIONS FOR HIGHER LEARNING.

At the head of the public school system of the State for negroes stands the Florida Agricultural and Mechanical College at Tallahassee. It has 250 acres of very excellent land and commands a most impressive view in all directions. Upon these hills is growing up a plant that will be a

credit and pride to the State of Florida and a boon to the negro race of incalculable value. Within recent years it has undergone complete reorganization, worked out in a conservative but very thorough manner. It is now upon a substantial working basis, and under the very sane and constructive administration of President J. R. E. Lee very definite results are being secured in the various departments.

Under the direction of the State Board of Control a permanent plant is being developed that will be both attractive and utilitarian. The legislature of 1925 made liberal appropriations for a building program, and this was supplemented by an appropriation of \$100,000 by the General Education Board.

While it is desirable to develop and strengthen this institution to as complete degree as possible, it is the feeling of the writer that the State should maintain an institution for normal training at some place well down the peninsula to accommodate that large body who would like to have and should have teacher-training, but who can ill afford the traveling expenses to the State college.

It is my impression that a good plant in a choice location could be secured at a price very much below its real cost or value.

The writer has just returned from attending an all-Southern conference on Negro Education at Winston-Salem, N. C., and that State has established and maintains four standard negro normal schools for the training of negro teachers, and our conference was held in one of these that is being developed into a regular teachers' college in which regular degrees in education will be conferred.

INSTITUTIONS OTHER THAN STATE COLLEGE

There are a number of church and independent schools that are getting well equipped and that have rendered and are rendering most valuable services. The outstanding ones of these are Edward Waters College and the Boylan Home School of Jacksonville, the Florida Normal and Industrial Institute of St. Augustine, and the Bethune-Cookman College of Daytona Beach. The Florida Memorial College of Live Oak is a very old school and has done much good work, but it has been sorely crippled for lack of funds. It is owned and operated by the negro Baptists of the State.

Edward Waters College is supported and operated by the A. M. E. Church of the State. This is a strong organization and they have maintained a good school for many

years out on King's Road in Jacksonville. They have a good plant and it seems to have been well managed.

The Florida Normal and Industrial Institute has one thousand acres of land out about three miles west of the city of St. Augustine, and their own station of College Park on the F. E. C. Railway. This institution has been developed by Prof. N. W. Collier, and is an outgrowth of the Florida Baptist Academy of Jacksonville that he operated for many years. It has enjoyed the cordial good-will and a number of liberal donations from the local white people of St. Augustine. The most prominent donor was Dr. Andrew Anderson, who gave \$10,000 on the splendid new building and other aid at sundry times.

They have quite an ambitious building program shaping itself up now, and quite a number of the local white citizens of St. Augustine have subscribed liberally, and they expect liberal aid from the General Education Board, who gave them \$10,000 on their present new building. They have recently erected a very attractive and well-adapted hospital building that is being used as a men's dormitory for the summer school.

This institution will probably grow and develop for many generations as a monument to the fidelity and courage of Nathan W. Collier, the founder and present principal, and a few able assistants that he drew around him.

The Bethune-Cookman College of Daytona Beach is one of the most outstanding features of negro education that has been developed in the country. It is about twenty-two years old and has a plant conservatively estimated to be worth not less than \$600,000. This institution also is a wonderful living monument to the ability and efforts of one person and a few able assistants she drew around her.

Mrs. Mary McLeod Bethune, the founder, builder and present president, ranks among the foremost negro educators of the country. The school has been owned by and under the management of the M. E. Church for the past two years.

There are several other smaller church and independent schools that have done much good work, most prominent of which is Fessenden Academy in Marion County, seven miles north of Ocala, where they will dedicate their new buildings at an early date. For many years they have chosen a very thorough type of work and they are now planning a new academic building to cost not less than \$50,000.

COUNTY TRAINING SCHOOLS.

This is a type of public school for colored that has grown up in the Southern States within recent years until there are more than 250 in active operation. They are usually in small towns or large rural communities where conditions will warrant employing a number of teachers and installing industrial equipment.

This year we are operating nine training schools, as follows:

Jackson County Training School, at Marianna, where a substantial building of natural rock has been erected on the public highway from the city to the State Industrial School. The principal is a Smith-Hughes agricultural teacher and is a graduate of the agricultural department of Tuskegee Institute.

The Columbia County Training School at King's Welcome, out from Lake City, has been built on a ten-acre tract donated by a thrifty and worthy colored farmer of the community, to the county school board, in order to get a good school in the community. They have a Smith-Hughes agricultural teacher, and have the support and encouragement of the board and superintendent. It is hoped to have a teachers' home here before long. The county school board has made provision for transporting the children of another school to this one, thus increasing the attendance by seventy-five pupils.

The Alachua County Training School at Alachua has an excellent building with an auditorium and a separate shop building on an eight-acre tract. The school has done much excellent work and has the good will and support of the white as well as the colored people of the community.

The Polk County Training School at Florence Villa has been built on a five-acre tract occupied by a bearing orange grove. They have an excellent new building, and the building, equipment and grounds are estimated to be worth not less than \$30,000.

The Lake County Training School at Leesburg has an excellent brick, tile and stucco building, a separate shop for boys' work, and a good teachers' home recently completed by co-operation between the county board and the Rosenwald Fund. These three buildings are on a fine five-acre tract and the principal is a Smith-Hughes agricultural teacher. The teachers' home here is the first one to be built at a county training school in Florida and is well

adapted to its purpose in having five bedrooms, parlor, kitchen, dining room and bath room, all completely furnished with modern equipment. The building is fully painted inside and out and supplied with city water and electric lights.

The Palm Beach County Training School at Delray was the original training school of the State and has done much good work and has a well-equipped shop where much work for the community is done. The local and county boards contemplate building an enlarged plant on a larger body of land, where the school will have an opportunity to expand.

The St. Lucie County Training School is the local public and high school at Fort Pierce, where they have recently added to their plant by building an excellent Rosenwald six-teacher building with an auditorium and good furnishings and very complete equipment. Here also the county is transporting another school to the training school.

The Martin County Training School is at Stuart, and has a new shop building, with equipment.

The Dade County Training School is at Coconut Grove, below Miami, where they have a good building of unique design, which was badly damaged in the storm, but which has been fully repaired.

COUNTY INDUSTRIAL TEACHERS

The Jeanes Fund co-operates with county school authorities in the southern states in employing a peculiar type of worker in the rural negro schools. This worker, teacher, or supervisor, as she may be designated, is a negro woman of usually superior training in general education and industrial efficiency who has a personality adapted to her special work, and her business is to visit the colored rural schools and teach the common industries for boys and girls and also instruction in health, sanitation and any other matter that may be found to need attention.

There are more than three hundred such teachers employed in the southern states, and we have twelve in Florida.

The following counties employ these workers this year: Escambia, Jackson, Gadsden, Leon, Suwannee, Columbia, Alachua, Putnam, Lake, Orange, Seminole, and Volusia.

In employing these teachers the Jeanes Fund has been contributing \$50 per month for eight months in the year,

and the counties have furnished the remainder, which has ranged from \$25 to \$50 per month. In most of the counties this work is regarded as having been of inestimable value to the negroes and incidentally to the communities at large. In Orange and Volusia counties the emphasis has been laid upon the health work, and it is not probable that any more efficient school health supervision has been carried on in any part of the country than in the colored schools of Orange County. These teachers also do much community service in many lines.

NEGRO HIGH SCHOOLS

We have had many inquiries in regard to accredited high schools for negroes in Florida, and until last year we had always had to explain that while many public negro schools were doing high school work and in many instances calling themselves high schools, there was no machinery by which they could be accredited and no attention had been paid to them in this matter. It was somewhat embarrassing to have about eighty negro public schools reported from the other southern states as accredited high schools, while none of ours had been accredited. In this connection it may not be out of place to mention that Florida was requiring the same standard for both white and colored schools, and it is our understanding that this did not always hold good in the other states.

The first negro school in the state to be accredited was Central Academy, of Palatka, which had been equipped and developed under the management of Prof. Clarence C. Walker, as principal, with the liberal support of the public school authorities and plans are being made for a new plant and greatly enlarged facilities. For the year 1925-26 Lincoln Academy, of Gainesville, was added, and a number of others are getting in line.

City Buildings.—It is very gratifying to note the tendency for the cities to provide adequate facilities. The most outstanding of these at this time are a \$300,000 building with fifty rooms at Miami and a new \$100,000 plant at Fort Myers.

SUMMER SCHOOLS

The A. & M. College operated a regular state summer school for teachers and the last session shows the strongest summer school for colored that has ever been conducted in the state.

At the Florida Normal Institute at St. Augustine we also had a splendid summer term. Each institution is aided on the expenses of the summer terms by the General Education Board.

We have summer school students at a number of schools out of the state, and we had an item of \$200 made available by the General Education Board for aiding a number of certain types of teachers in attending the summer schools at Tuskegee Institute and Hampton Institute.

CO-OPERATING FUNDS.

For the past several years the state departments of education in the southern states have been in touch with and have had aid from four separate funds in various features of their negro school work. These funds or boards are as follows:

THE GENERAL EDUCATION BOARD

This is the corporation organized to administer the education funds provided by Mr. John D. Rockefeller, running far into the millions. The offices are at 61 Broadway, New York City, and the outstanding character in the building up of this organization and the shaping of its policies was Dr. Wallace Buttrick, who died about a year ago. The president succeeding Dr. Buttrick is Dr. Wickliffe Rose, formerly of Tennessee, and well-known to the school people of the south and the nation.

The board has assembled a staff of specialists in the various fields of education probably not excelled in the country or in the world.

Their aids in Florida have consisted in providing funds to the state department for employing and paying the traveling expenses of the state agent or supervisor for the negro school work; the salary and expenses for the state high school inspector through 1925; funds for aiding in equipping negro county training schools; funds for the salary and expenses of the professor of secondary education at the University of Florida through 1925; funds to aid

a limited number of negro teachers to attend summer schools at Tuskegee Institute and Hampton Institute; funds to aid on the expenses of the summer schools for negroes at the A. & M. College and the Florida Normal Institute; a contribution of \$100,000 to co-operate with the state in a permanent building programme at the Florida A. & M. College for negroes at Tallahassee; a donation of \$10,000 to aid on the new administration building for the Florida Normal and Industrial Institute at St. Augustine; scholarships for a limited number of both white and colored young men at selected institutions for special work.

It is hoped to have substantial aid from them in a building programme at the Florida Normal Institute at St. Augustine.

The state hopes to have their aid in both funds and staff in an exhaustive survey of educational conditions to be made as early as matters can be arranged for it.

This work in the South is administered through two general field agents, viz., Mr. Jackson Davis and Mr. Leo. M. Favrot, with headquarters in Richmond, Va., and Baton Rouge, La., respectively.

THE JULIUS ROSENWALD FUND

This fund is a personal donation that has been made annually for a number of years by Mr. Julius Rosenwald, of Chicago.

The fund co-operates with the public school authorities of the Southern states in building a better type of negro school building, and the annual appropriation has approximated a half-million dollars for some years.

It has aided in building more than 3,600 school houses in the South and forty of these are in Florida. During the past year the fund has aided in the building of nine houses—eight school houses and one teachers' home.

These houses are at Fort Pierce, St. Lucie County, a very complete five-teacher building with an auditorium; at Reddick, a three-teacher building, and one at Bethlehem for two teachers, both in Marion County; a one-teacher building at Ocklockonee, in Leon County; three two-teacher buildings in Gadsden County; insurance adjustment on new eight-teacher building, with auditorium, at Florence Villa, Polk County; an eight-teacher building at Coconut Grove, in Dade County; three-teacher building of most excellent type and finish at Boynton, in Palm Beach County;

teachers' home and training school at Leesburg, Lake County, two-teacher building at Fort White, and a five-teacher building at Springville in Columbia County; two-teacher building at Montclair, three-teacher building at Mt. Dora, and a \$25,000 addition to the Eustis building, all in Lake County, also a four-teacher building of best construction at Orange City, Volusia County.

Up to date we have had aid from this fund in the following counties: Alachua, Brevard, Columbia, Dade, Gadsden, Jackson, Lake, Leon, Marion, Orange, Martin, Palm Beach, Polk, St. Lucie, Sarasota, Volusia, and Walton.

This fund is administered through Mr. S. L. Smith, general agent, Nashville, Tenn. The indications are that the coming year will be an active building year.

THE JEANES FUND

This is a permanent fund provided by Miss Anna T. Jeanes, of Philadelphia, who died several years ago, the purpose of which is to aid in providing industrial training for rural negro schools of the southern states, and allied activities.

This work has already been mentioned and we shall say no more here than that it is administered through Dr. James H. Dillard, president of the board and with headquarters in Charlotte, Va. There are two field directors, Mr. B. C. Caldwell, with headquarters in New Orleans, and Prof. W. T. B. Williams, with headquarters at Tuskegee Institute.

THE SLATER FUND

This fund confines its aid to helping on the salaries of teachers in county training schools, and Dr. Dillard is president of this board also and it is administered through the same machinery as the Jeanes Fund.

PERSONAL STATEMENT

On January 1, 1920, an agreement was arrived at between the State Department of Education and the General Education Board for there to be furnished to the State Department an agent to handle the work incident to the use of the several funds and to generally promote the cause of negro education.

This work has been inaugurated by Mr. B. C. Caldwell as field director for the Jeanes and Slater boards some time

previous and a number of Jeanes workers had been employed, aid had been extended to the Delray school as a county training school, and certain independent or church schools had received some aid from the Slater Fund, but the working of the boards and the nature of the aids available were but little known in the state at large.

For the past seven years, I have carried on as best I could with such failures and successes as have met our efforts during this period.

It has been a rich and most interesting experience, such as falls to the lot of but a very limited number. In some measure it means being a mediator between two races and between two parallel civilizations occupying the same territory at the same time with many things in common and some things antagonistic.

It is exceedingly gratifying to note the increasingly kindly attitude of the school officials and public at large toward the general proposition of furnishing suitable and adequate school facilities for the colored as well as for the white children of the State. The feeling has pretty thoroughly taken hold of the public at large that it is neither safe nor humane to have thirty-five per cent of the population of the state without access to the well springs of knowledge.

Personally, I cannot close this statement without expressing my very deepest appreciation for the uniformly courteous attitude that I have enjoyed from the officers of the several boards and the men from the other states with whom I have been associated, the state superintendents and their staffs in the department of education whose willing aid and encouragement have been my strong support, the county and local school authorities who upon so many occasions have given the most considerate attention to our suggestions and requests.

Very especially do I wish to commend the loyalty and sacrificing spirit shown by so many of the colored people in their efforts to secure better school facilities and the eagerness with which many take advantage of such opportunities as they may have. They are deeply appreciative of any kindly consideration given them and this spontaneous appreciation upon their part, bordering upon affection, is probably the most inspiring feature of our work.

Very respectfully submitted,

J. H. BRINSON,
State Supervisor of Negro Education.

CHAPTER VII.

This Chapter is devoted to the school statistics for the school years of 1924-25 and 1925-26.

Statistics frequently make uninteresting reading but school statistics deal with vital facts with which most people are personally concerned—some from a financial standpoint, some from interest in their children and others from an interest growing out of pride in the State's progress. Statistics may be valuable in themselves or they may be of value in showing the growth of an institution by a comparison of one year with that of former years.

A few comments upon the statistics given in this report are herewith made in the hope that they may be of interest to the public and may show the growth of the public school system in the past few years. The growth in the past five years may be shown by comparing figures for 1926 with those of 1925. There is a smaller number of schools in the State now than there was in 1921 but this is a good indication of efficiency and progress rather than otherwise for the reason that the number was reduced by the consolidation of schools and the transportation of school children to better equipped and more efficient schools. This improvement has been brought about by a better understanding of the merits of consolidated schools and, by better means of transportation.

The enrollment in the public schools in 1921 was 227,408; in 1925 it was 288,107; while in 1926 it had increased to 342,643. This increase in the enrollment in the past five years is growing greater than the entire enrollment in the State twenty-five years ago.

The enrollment in the high school grades in 1921 was 15,026; in 1925 it was 26,665 and in 1926 it had increased to 35,074. The

greatest number of pupils enrolled in any one grade is found in the first, the number in that grade being 50,709.

The number of teachers employed in 1921 was 7,319; in 1926 the number was 10,666. The ratio of the number of teachers to the number of pupils enrolled remains about the same from year to year, the ratio being about 31 to 32 pupils to each teacher.

The total salaries paid teachers in 1921 was \$4,342,279.00, while in 1926 they were paid \$8,346,993.00—the amount being almost doubled in five years. The increase in amount paid in salaries from 1925 to 1926 was more than \$2,000,000.

The total school fund receipts including loans, bonds and time-warrants increased from \$16,144,853 in 1921 to \$50,492,472 in 1926.

The receipts for 1926 not including loans, bonds and time-warrants amounted \$18,009,877. Nearly fifteen million of the loans made and bonds issued in 1926 was spent for lots, building and equipment.

All school expenditures for last year—those for building and equipment, for schools proper and for administration amounted to \$31,054,264.35. Of this amount about one-half was spent for building and equipment, a little more than one-third for schools proper and a little less than one-sixth for administration of schools. The amount required to operate the schools last year was more than three and one-half times as great as the amount needed for that purpose in 1921. This was caused by the necessary increase in salaries of teachers and the many new buildings required to accommodate the great increase in school attendance.

For the school year ending June 30th, 1926, Florida paid for her public schools \$22.75 per inhabitant; we paid \$71.07 for each child of school age; \$90.63 for each child enrolled in the public schools and \$124.04 per child based upon average attend-

ance. These amounts include all expenditures not only for schools proper but for building and equipment and for administration.

At the close of the school year 1926 there was cash on hand in both county and district funds to the amount of \$11,997,139.77. Of this sum \$1,067,229.22 was county funds and \$10,929,910.55 was district funds. The increase in the value of public school property in the past five years has been most noticeable. In 1921 the value of all school property in the State was less than \$15,000,000 while in 1926 the value had increased to more than \$53,000,000—more than three and one-half times its value five years earlier. The valuation placed upon the school property of Dade and Duval counties alone, or upon the school property of Dade and Hillsborough alone in 1926, was equal to the value of the school property in the entire State five years ago.

TABLE I.—Total Population and School Population from State Census of 1925.

1924-1925 Counties	Total Population			School Population		
	Total	White	Negro	Total	White	Negro
In State	1,256,318	854,585	401,733	391,299	260,679	130,620
Alachua	32,337	17,970	14,367	11,078	5,955	5,123
Baker	5,561	4,108	1,453	2,115	1,642	473
Bay	11,873	8,757	3,116	3,953	2,932	1,021
Bradford	7,024	4,966	2,058	2,662	1,842	820
Brevard	12,820	8,522	4,298	3,654	2,343	1,311
Broward	14,242	9,451	4,791	3,967	2,400	1,567
Calhoun	11,365	7,979	3,389	4,411	3,164	1,247
Charlotte	3,390	2,673	715	1,051	825	226
Citrus	5,374	3,311	2,063	1,891	1,146	745
Clay	4,730	3,430	1,300	1,542	1,154	388
Collier	1,256	1,121	135	390	370	20
Columbia	15,259	8,215	7,044	5,524	2,873	2,651
Dade	111,293	82,424	28,869	26,409	18,995	7,414
DeSoto	7,949	6,195	1,754	2,564	2,029	535
Dixie	4,236	2,751	1,485	1,895	964	431
Duval	123,820	72,879	50,441	35,810	20,472	14,838
Escambia	42,395	29,964	12,431	13,489	9,749	3,740
Flagler	2,203	1,408	795	742	463	279
Franklin	5,239	3,050	2,189	1,688	991	697
Gadsden	12,643	8,553	13,690	8,563	3,147	5,416
Glades	2,467	1,906	561	829	614	215
Hamilton	9,904	5,648	4,256	3,861	2,202	1,659
Hardee	10,175	9,271	907	3,632	3,366	266
Hendry	1,107	1,077	30	358	353	5
